Application 3/2011/0559

Existing passing places on access to Higher Gill barn

Further to drawing DWG-05C for the above application, the below aerial photographs indicate the two existing positions identified in the application used occasionally for vehicle passing. It is proposed to improve these existing places to allow safe passing of vehicles, subject to land owners permissions.

It can be seen on the below image that the farm building past New Gill Barn is not present on the aerial photos. The images are therefore at least 8 years old.

Passing area

Farm building now present here

These larger scale images indicate the areas with red arrows already used occasionally for passing of vehicles. A width of 2.4m of consolidated hardcore can be laid to maintain their condition subject to approval from the land owners.
