Graeme,

I've had a quick look at this, and while I can't find the heat pump details on-line anywhere, the specifications given with the application give a noise level of 68dB

It is unclear whether this is a, c or z weighted but I'm presuming A weighted. No information is given over low frequency noise from the kit m but distance calculations will give a sound level on the boundary of just over 30dB, and would therefore be acceptable at the nearest property.

Hi Neil,

Could you have a look at the above application and give me your feedback on the proposed air source heat pumps they wish to install. A nearby neighbour is raising concerns over their noise.

Thanks,

Graeme
