Proposed Residential Development at Church Raike, Chipping

09-1441 Rev A

This application has been prepared by Croft Goode Architects on behalf of Liverpool Housing Trust

# **Application**

This statement accompanies the pre-application for the development of land for residential use at Church Raike, Chipping. It should be read in conjunction with the following drawings:

09-1441-L01 Location Plan

09-1441-P01 Existing Site Sections

09-1441-P02 Existing Site Section

09-1441-P03 Proposed Site Sections

09-1441-P04 Proposed Site Sections

09-1441-P05 Proposed Site Layout

09-1441-P06 Plot 1-6 Proposed Floor Plans and Elevations

09-1441-P07 Plot 7 Proposed Floor Plans and Elevations

#### The site

The site is a couple of hundred yards of the Chipping Conservation Area, which encompasses much of the centre of Chipping. The edge of the conservation may be extended to incorporate Club Lane and a section of Church Raike including the green. Chipping boasts 41 listed buildings, 24 of which are within the Chipping Conservation Area.

The report highlights a number of issues brought about through recent development in the village. These include insensitive refurbishment works to existing stone buildings and the way in which a number of significant local buildings had been allowed to fall into a state of disrepair. Smaller, seemingly unimportant, interventions had also had a detrimental effect on the character of the village. Among these were the poor selection of paint colours and even the impact of mandatory works to the public realm such as road markings. Clearly what can be determined from this is the consistency of the character of the local area and the importance of retaining it.

In a recent appraisal, Ribble Valley Borough Council sought to identify the various characteristics that justified the designation of the conservation area status. The report looked at the use of local material on both the buildings and streetscape and how well these materials had been preserved in their original condition in many instances for more than 150 years. The layout and street pattern were also identified among the village's key historic features. The report highlighted the significance of the views from Chipping towards Pendle Hill and the fells beyond. These views are especially clear from within the site itself and can be enjoyed by existing former council housing at their elevated position along Church Raike. Chipping itself is within the Forest of Bowland Area of Outstanding Natural Beauty.

PPS15 explains "It is the quality and interest of areas, rather than that of individual buildings, which should be the prime consideration in identifying conservation areas." Chipping has a strong consistent architectural language, which is discernible throughout the village. The predominant material palette of natural stone and slate roof tiles reinforces the village's identity and character.

#### The development

The development is for a total of seven houses, comprising six for social rent and one house for private sale. The smaller three bedroom houses are two storeys in height, have two car parking spaces each and are arranged in a semi detached configuration. The detached four bedroom house is two and a half storeys high and has a detached double garage to the rear of the site.

From the outset the design intent, after thorough analysis of the local character, context and place, has been to create a scheme that enhanced and preserved the conservation area. To this end the selection of materials has been made with direct reference to those found locally, notably the local stone cladding and slate roof tiles.

The massing and roofscape will be similar to that found locally. Pitched roofs will have a similar pitch to that employed locally.

The development's scale and height will be similar to that prevalent in the village, which is housing arranged in pairs no more than three storeys in height. By introducing rooms into the attic space of the larger house, the height will appear greatly reduced. The apparent scale of the scheme will also appear smaller given the elevated position of the terraces on the opposite side of Church Raike.

In its selection of materials, its scale and layout, the design of the scheme is rooted in a desire to find the balance between retaining the value and quality of the conservation area and a contemporary legibility that locates it firmly within the present.

#### Justification of the proposed works

Ribble Valley Council recently carried out a consultation event with local residents. The aim of this exercise was primarily to determine the requirement for housing in the area. A further aim of the event was to gauge an idea of the value of the Chipping Conservation Area and its significance to local people and visitors to Chipping, who come because of its proximity to an Area of Outstanding Natural Beauty as well as the inherent beauty and character of the village itself.

The event identified a need for housing, with the majority of attendees approving of the amount of accommodation and the character of the scheme.

New housing on Windy Street has been well received in terms of its design. In its selection of materials, scale and typology, this small scheme blends well with the streetscape and successfully preserved the character of the conservation area, especially given its proximity to a large number of Chipping's listed buildings. The proposed development looks to employ a similar approach, identifying the strengths of this recent development in enhancing the character of the conservation area.
