CEMHD Unit 5
Head of Unit Mr Stuart Reston

Date: 19 April 2013

For the attention of Mr J Machole

Dear Sir

THE PLANNING (HAZARDOUS SUBSTANCES) (AMENDMENT) (ENGLAND) REGULATIONS 2009

Proposal: Storage and use of hazardous substances falling within Parts A, B and C of
Schedule 1 to the 1992 Regulations

Location: Samlesbury Aerodrome, Balderstone, Lancashire, BB2 7LF

Applicant: BAE Systems (Operations) Ltd

1. The Health and Safety Executive has assessed the risks to the surrounding areas from the likely activities resulting from the granting of Hazardous Substances Consent at BAE Systems (Operations) Ltd, Samlesbury Aerodrome, Balderstone, Lancashire, BB2 7LF.
2. Only the risks from hazardous substances for which Consent is being sought have been assessed. HSE has assessed the risk of harm from the maximum quantity of hazardous substances for which Consent is being sought. Risks which may arise from the presence of other substances have not been taken into account in this assessment. HSE's assessment considers risks to people and has not considered the effects of substances categorised solely as Part B10 ('Dangerous for the Environment').
3. In considering this application for Consent, HSE has made the assumption that the requirements of the Health and Safety at Work etc. Act 1974, and all relevant statutory provisions, will be met at the establishment should Consent be granted. Accordingly HSE advises that you should direct the applicant's attention to section 29 of the Planning (Hazardous Substances) Act 1990. This makes it clear that nothing in any Consent granted can require or allow the building or operation of an establishment which does not comply with the relevant statutory provisions and to the extent that any consent purports to require or allow any such thing it is void. On this basis, HSE has concluded that the risks to the surrounding population arising from the proposed operation(s) are so small that **there are no significant reasons, on safety grounds, for refusing Hazardous Substances Consent.**
4. Following Government advice that particulars in the application Form do not automatically become conditions of consent, it would be beneficial to include conditions such as:

"The Hazardous substance(s) shall not be kept or used other than in accordance with the particulars provided on the application Form, nor outside the areas marked for storage of the substance(s) on the plans which formed part of the application."

5. Tables A, B, C and D submitted with the application form list specific substances for each 'sub-area'. HSE's advice and proposed consultation arrangements are on the basis that substances categorised as Part B1 ('Very Toxic') and Part B2 ('Toxic') shall only be present as specifically named/described in the tables. It is suggested that the following be included as a condition of consent:

"For each entry in Tables A, B, C and D of the application, the substances categorised as 'Very Toxic' or 'Toxic' under Parts B1 and B2 of Schedule 1 of the Regulations shall be restricted to the specific substance named/described for that entry in Table A and with the concentration of solution specified for that entry."

6. A consultation zone of zero meters, measured from the site boundary has been determined. Unless we hear from you in the near future that the application has been refused, a zero consultation distance will be shown for this site in the Consultation Zone Library which is part of HSE's PADHI+ land-use planning advice system. This system is available on-line to your designated administrator and users. When consent is granted please send a copy of all the consent documents to this office so that our records can be updated.

Yours faithfully

D Tsakiris
