

Woody’s Cafe proposed interior plan

- INTERIOR WALLS AND CIELING– Clad in hygienic food grade pvc sheets.
- FLOORS– Commercial grade AC4 8mm anti slip laminate with rubber matting on heavy traffic areas.
- WASTE– Separate bins for waste and recycling.
- CHILLED STORAGE– One larder fridge. (existing unit has one small under counter fridge, a new unit would allow space for a tall larder fridge)

A new unit would allow me to create a space tailored much more efficiently for the needs of my customers, there is nothing I take more seriously than the safety of my customers and I want to do as best as I possibly can by them. I do have a hygiene rating of 5 in the existing unit, which I am very proud of, but, it is simply not possible to get the place up to the standards I would like, this is mostly due to the age of the unit and why replacement would be better than repair.
