## 1.0 Introduction

In 2017 a Reserved Matters application no. 3/2017/0183 was submitted to Ribble Valley Borough Council for the construction of a residential development on land off Church Rake in Chipping. The reserved matters application relates to the development of a piece of land in the Site Wide Planning Guide Drawing No. 05024\_mp\_00\_105. A Site Wide Flood Risk Assessment for the development was submitted with the original planning application in October 2013. Planning approval has been granted subject to a number of planning conditions, including three conditions relating to the drainage of the development.

This report has been prepared to remove the drainage related planning condition applicable for the application.

## 2.0 Outline Drainage Strategy

### 2.1 Surface Water Strategy

The current site is undeveloped and is therefore defined as greenfield.

The outline drainage strategy is to provide new separate surface water and foul water adopted drainage networks. Foul water generated by the development will discharge unrestricted to the combined public sewer in Church Rake, as agreed with United Utilities. Correspondence with United Utilities is included in Appendix C of this report.

The Planning Policy Guidance (PPG) hierarchy for the disposal of surface water was considered and taking into consideration the local site conditions, details of the various options are illustrated in the table below:

**Table 1: SuDS Hierarchical Approach**

Method	Suitability	Suitability for Development
Infiltration to Ground	No	Site investigation has confirmed that infiltration based options would not be suitable
Connection to Watercourse	Yes	Connection to watercourse to north of the site.
Connection to Surface Water Sewer	No	Connection to watercourse is the preferred option.
Connection to a Combined Sewer	No	Connection to watercourse is the preferred option.

Ground Investigations have confirmed that the ground conditions are generally clay and therefore not suitable for infiltration methods of drainage. Therefore, discharge of surface water to the unnamed watercourse to the north of the site was considered to be the preferred option. An extract from the Grouund Investigation Report is shown below.

#### 5.6 Soakaways

- 5.6.1 The use of soakaways within the natural ground is not feasible at the site due to the presence of relatively impermeable strata underlying the site.

The surface water drainage strategy is to provide private surface water drainage networks which will discharge into a new surface water public sewer network to be adopted by United Utilities. A private surface water package pumping station will be used to lift flows from a low-lying area in the south west of the development up to the adoptable drainage network. The discharge rate from the development will be restricted to greenfield run off rates using a Hydrobrake flow control device. Below ground surface water attenuation will be provided by

oversized pipes within the proposed public sewer system and geocellular storage crates in the private drainage network.

Drawings 3081-SHD-00-ZZ-DR-C-0100 and 0101 – Proposed Drainage GA in Appendix A defines the agreed drainage strategy.

Hydraulic calculations are included in Appendix B of this report.

The proposed private drainage layout for the new development site has been designed in accordance with BS EN 752: 2008 and Building Regulations Part H guidance, i.e. up to the 30 year storm return period criterion and tested for the extreme 100 year event to confirm no flood risk to the buildings. Note that the below ground drainage network has been sized to retain the peak 100 year plus 40% climate change event.

## 3.0 Drainage Related Planning Conditions

### 3.1 Planning Condition

#### Planning Condition No. 41

The written planning condition is:

Notwithstanding any indication on the approved plans, no development approved by this permission shall commence on a land parcel (as defined on Dwg No 05024\_MP\_00\_105) until a scheme for the disposal of foul and surface waters for the parcel has been submitted to and approved in writing by the Local Planning Authority. For the avoidance of doubt, surface water must drain separate from the foul and no surface water will be permitted to discharge directly or indirectly into existing sewerage systems. The development shall be completed, maintained and managed in accordance with the approved details.

#### Planning Condition No. 42

The written planning condition is:

The development permitted by this planning permission shall only be carried out in accordance with the approved FRA (v1.1, dated October 2013) and the following mitigation measures detailed within the FRA: i) Limiting the surface water run-off generated by the 1 in 100 year plus climate change critical storm so that it will not exceed the run-off from the undeveloped site and not increase the risk of flooding off-site. ii) Implementation of all mitigation measures set out in Sections 4 and 7 of the FRA (v1.1, dated October 2013). The mitigation measures shall be fully implemented prior to occupation and subsequently in accordance with the timing / phasing arrangements embodied within the scheme, or within any other period as may subsequently be agreed, in writing, by the Local Planning Authority.

#### Planning Condition No. 43

The written planning condition is:

No development shall take place until a surface water drainage scheme for a land parcel (as defined on Dwg No 05024\_MP\_00\_105), based on sustainable drainage principles and an assessment of the hydrological and hydrogeological context of the development, has been submitted to and approved in writing by the Local Planning Authority. The drainage strategy for that land parcel should demonstrate the surface water run-off generated up to and including the 1 in 100 year plus climate change critical storm will not exceed the run-off from the undeveloped site following the corresponding rainfall event. The scheme for that land parcel shall subsequently be implemented in accordance with the approved details before the development is completed.

### **3.2 Input to Remove Drainage Conditions**

#### Planning Condition No. 41

The proposed drainage strategy for the site is indicated in Section 2. The drainage layout drawing in Appendix A and the supporting calculations in Appendix B are deemed sufficient to remove the condition.

#### Planning Condition No. 42

Surface water discharge rates are to be restricted to the equivalent greenfield run-off rates for the site. The surface water drainage system has been designed so that no flooding will occur for events up to 1 in 30 year return period. Some minor exceedance flooding will occur for events of 1 in 100 year plus 40% climate change return period however due to the proposed levels of the site these will runoff away from properties whilst being contained within the development. The drainage layout drawing in Appendix A and the supporting calculations in Appendix B are deemed sufficient to remove this part of the condition.

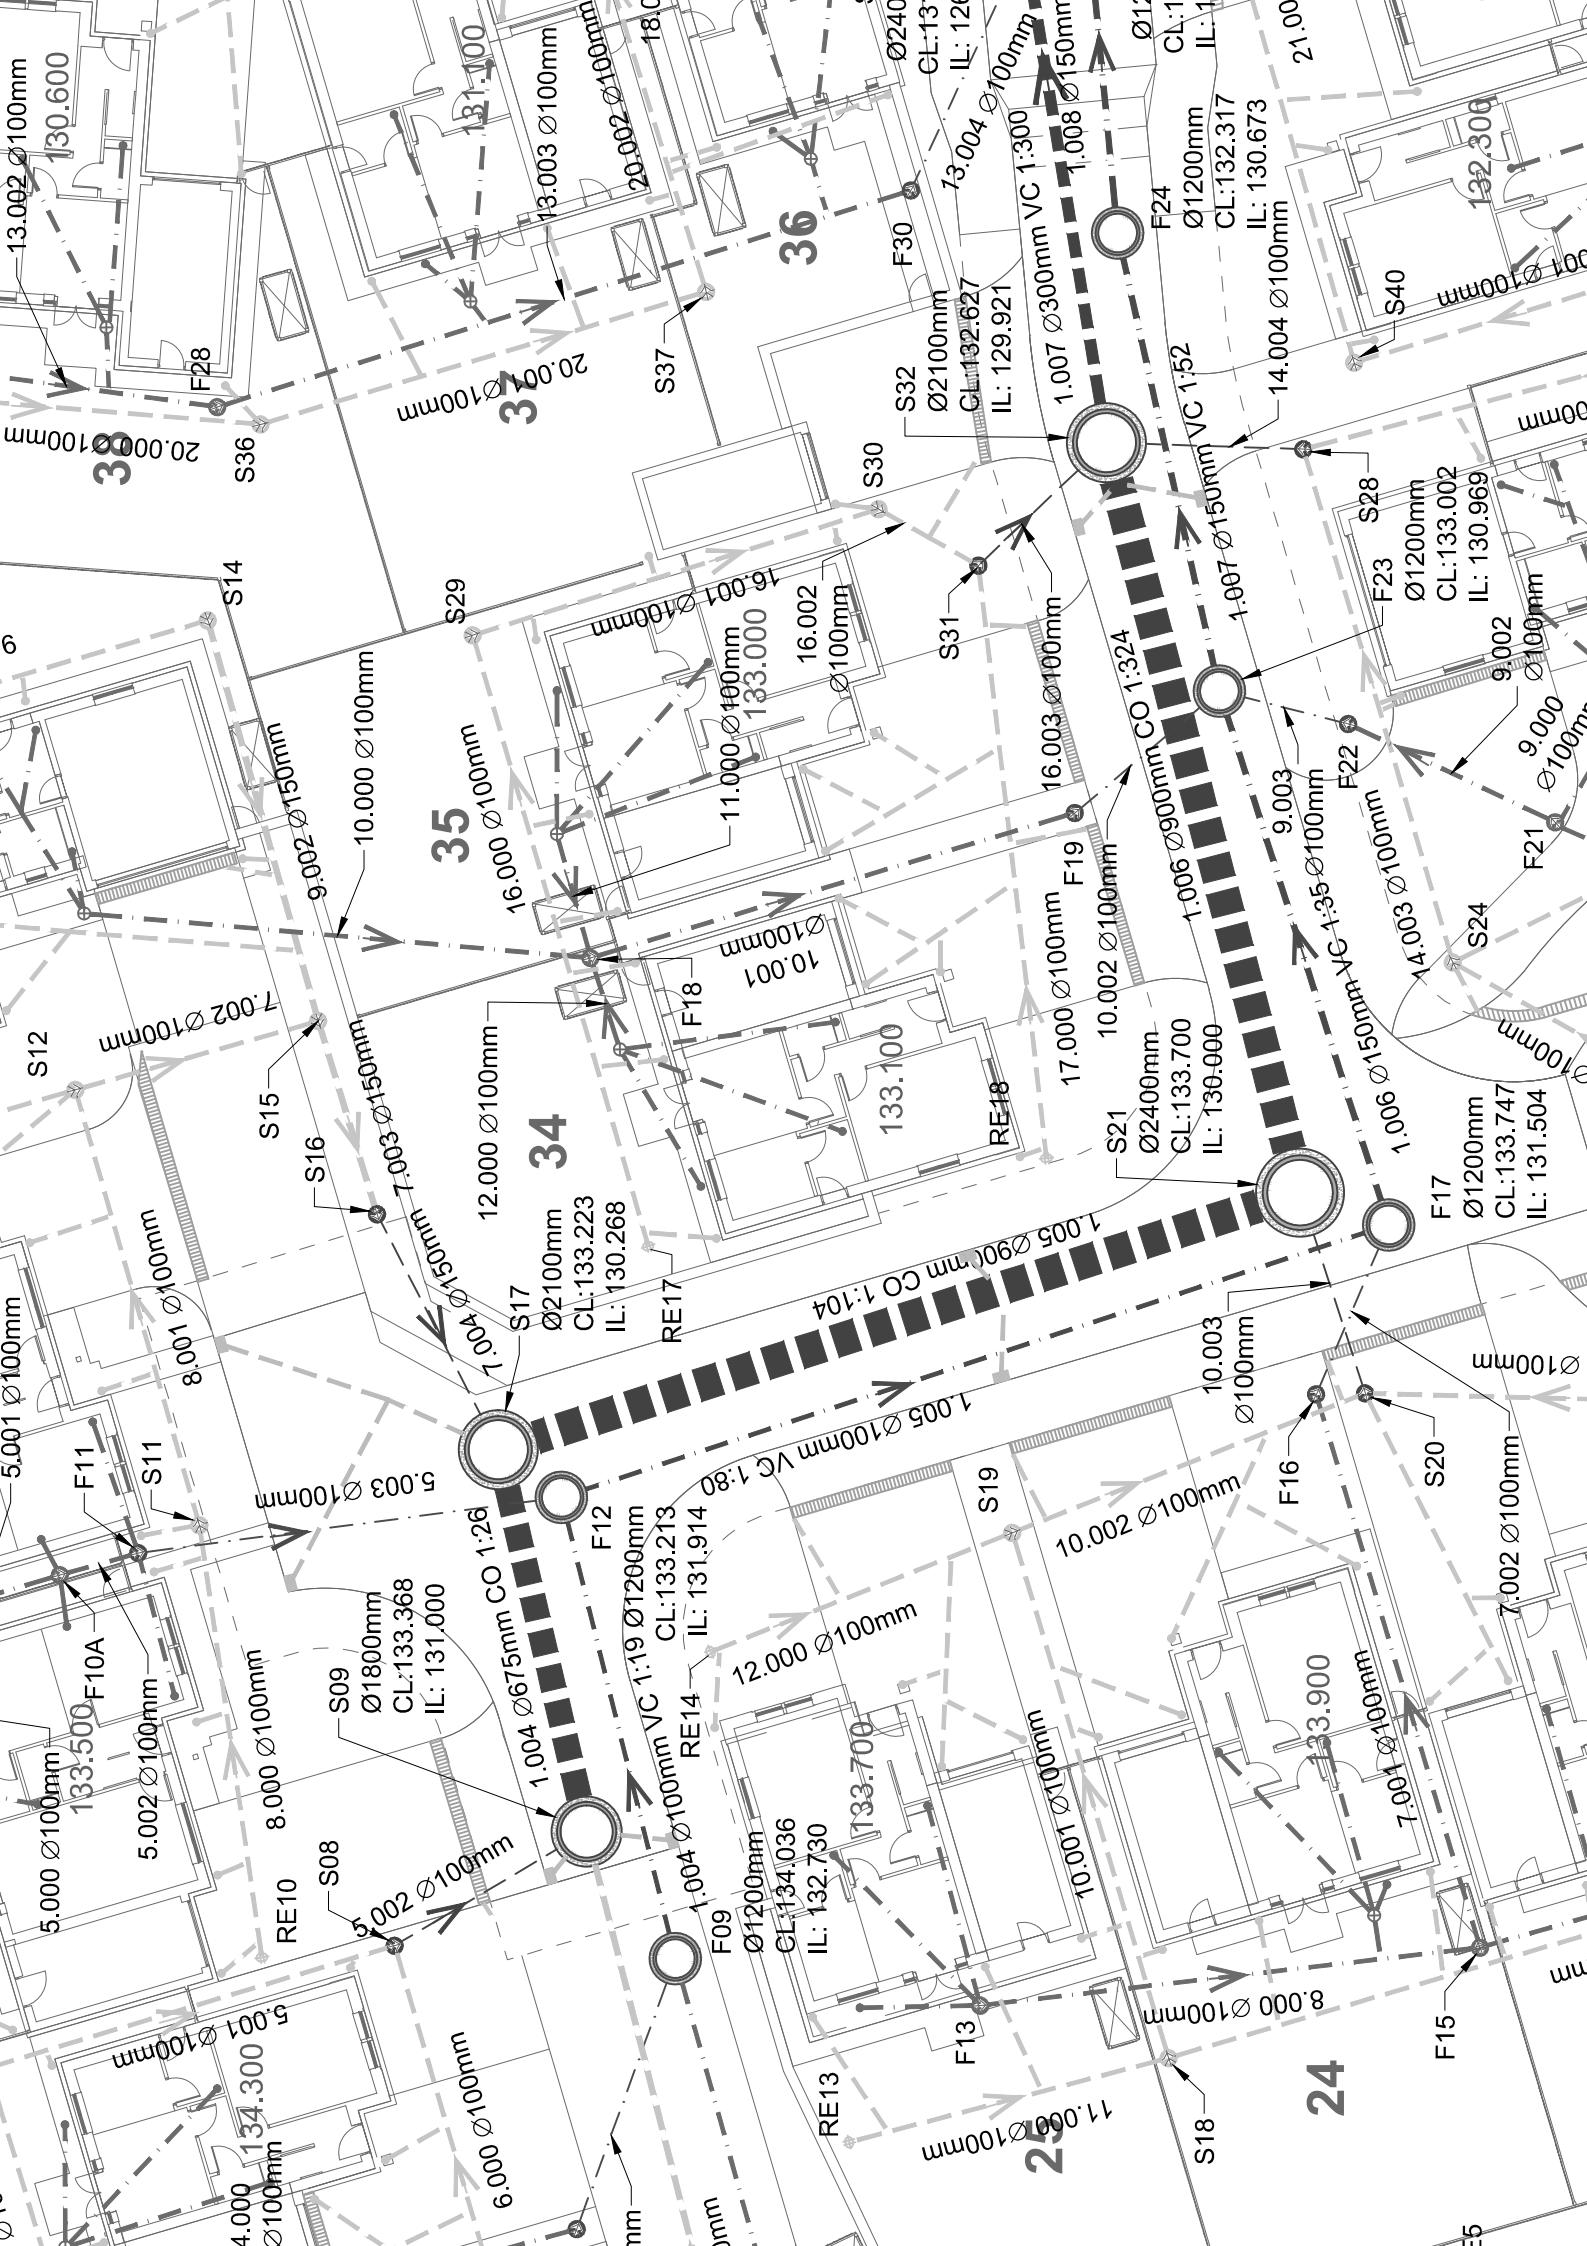

The reserve matters application to which this report refers, relates to a land parcel which is part of a wider development as defined on Dwg No. 05024\_MP\_00\_105. The FRA submitted with the initial outline planning application relates to the wider development and the land parcel to which this application relates to is referred to as The Hive in the FRA. The Hive lies within a Flood Zone 1 area. The mitigation measures outlined in the FRA were designed to provide flood protection to the other land parcels which are at greater risk of flooding. Therefore, the mitigation measures are not required for this particular land parcel.

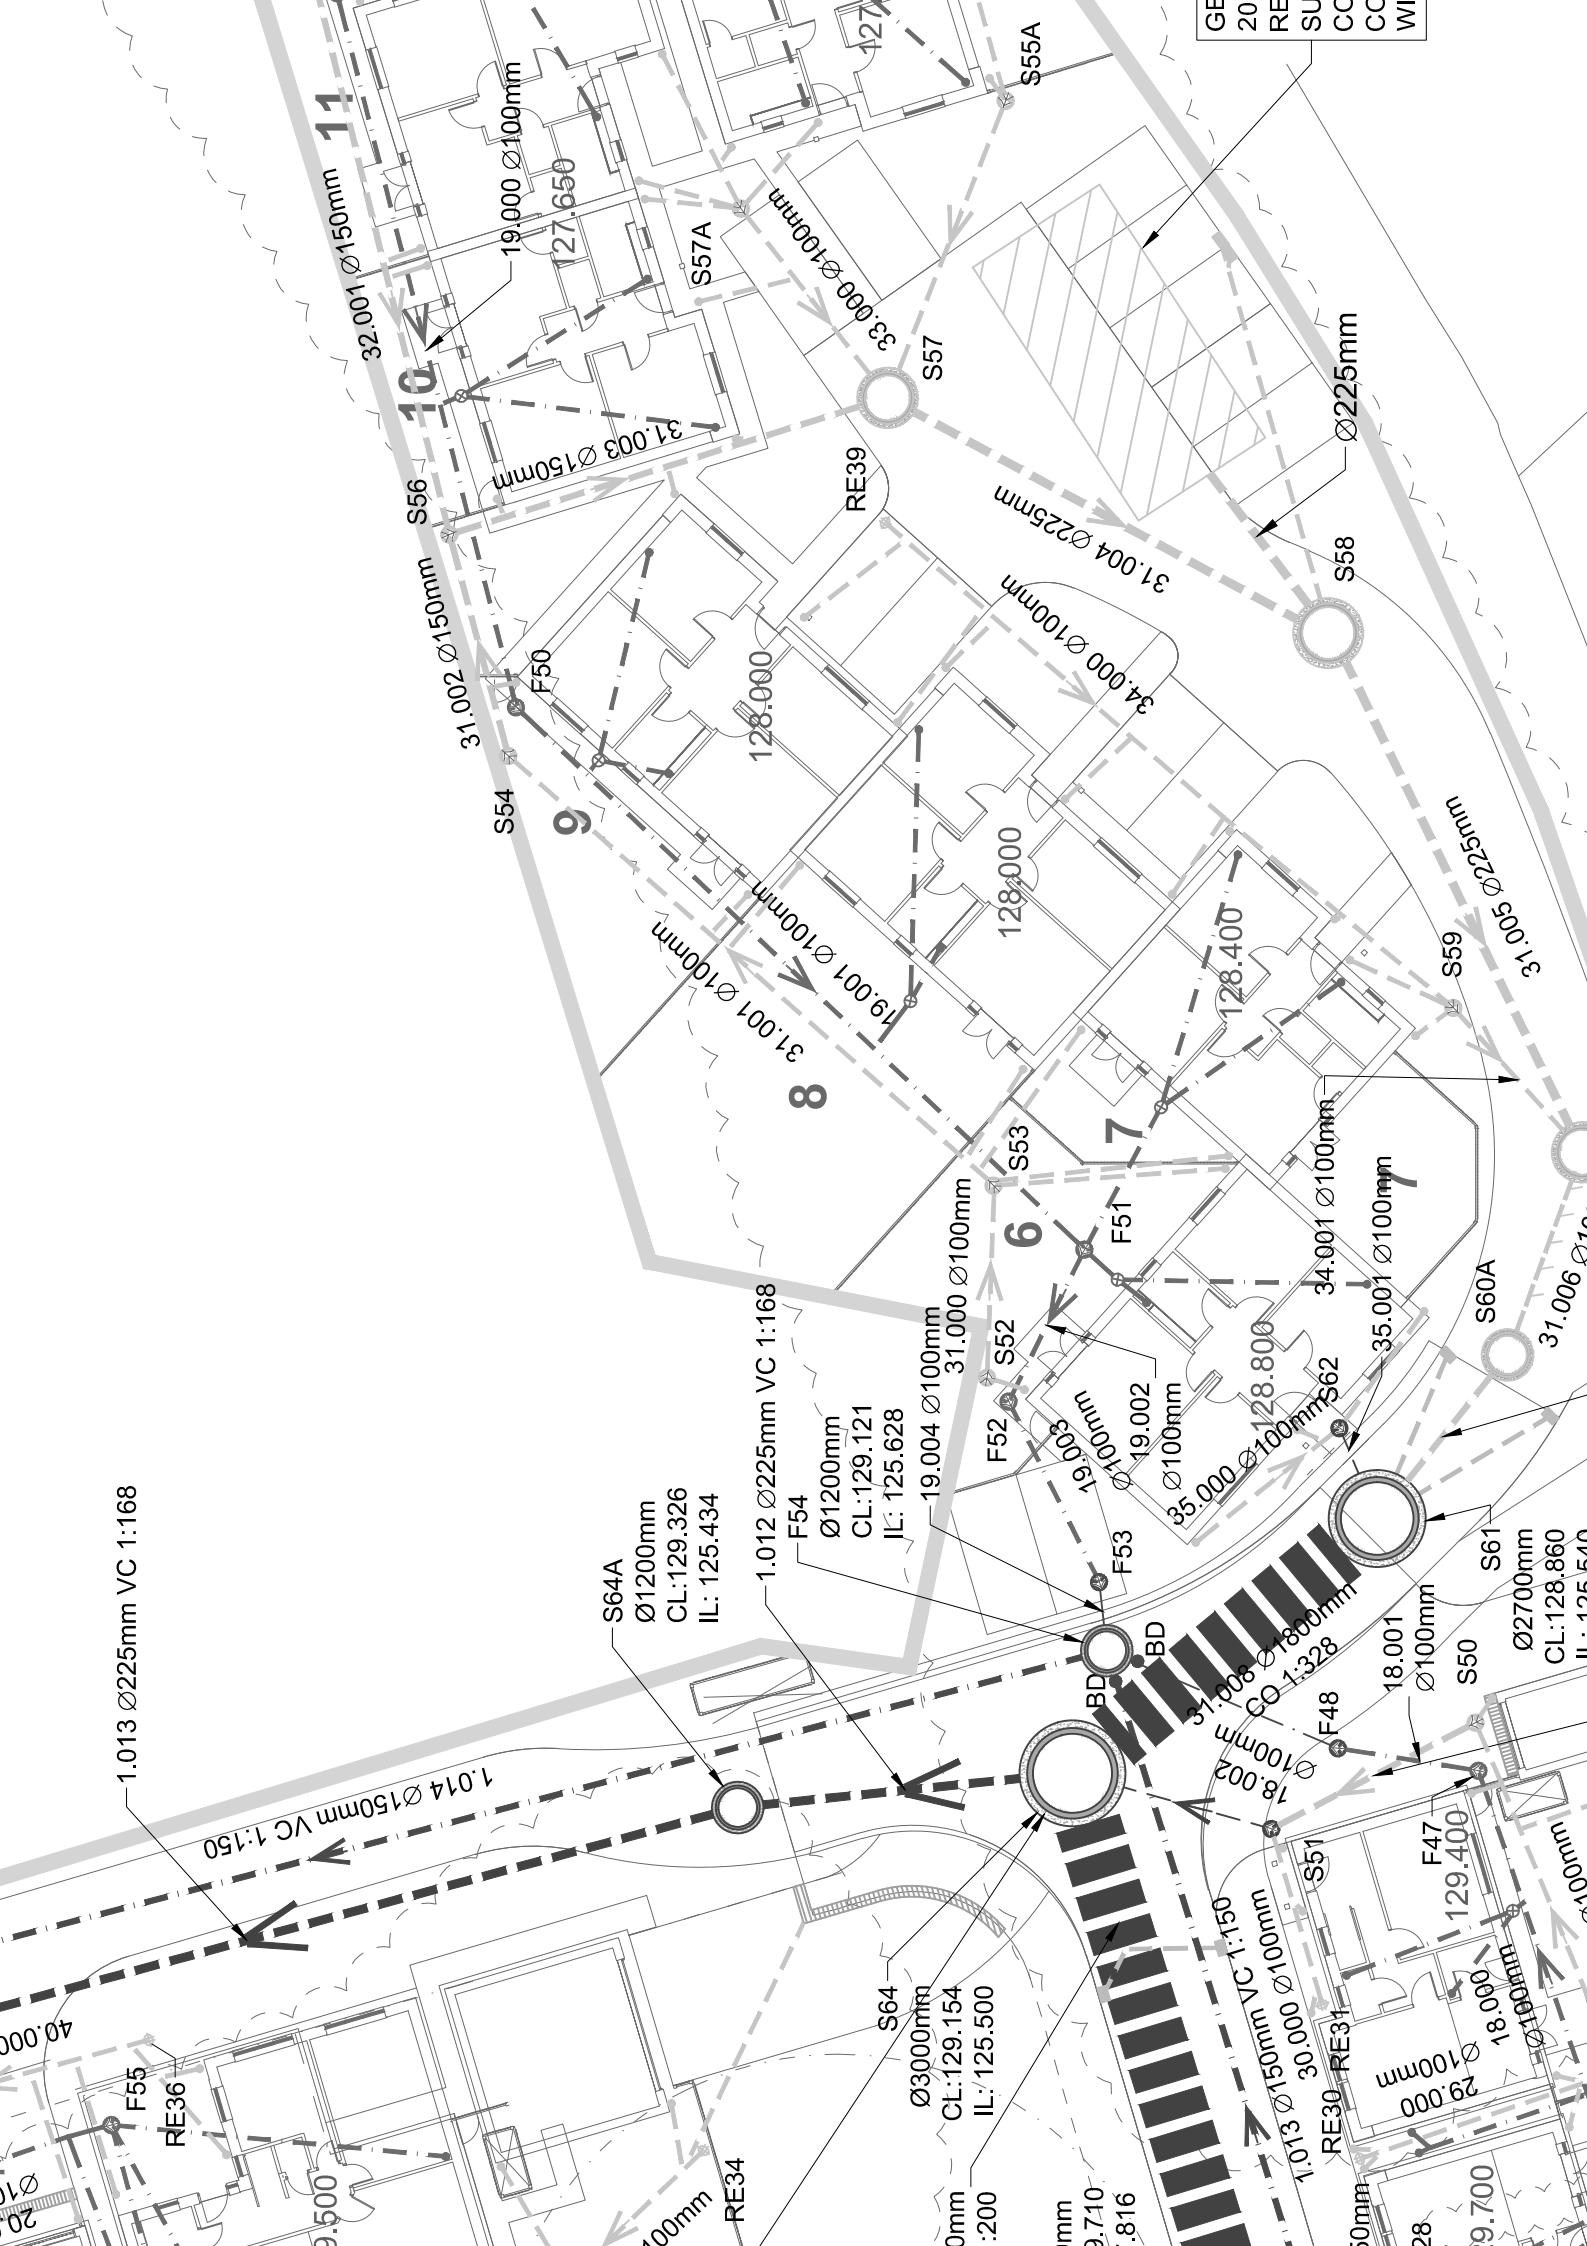

#### Planning Condition No. 43

The proposed drainage strategy for the site is indicated in Section 2. The drainage layout drawing in Appendix A and the supporting calculations in Appendix B are deemed sufficient to remove the condition.

## Appendix A – Scott Hughes Design Drawings

1.200	3.0000	2.800	3.0000	4.400	3.0000	6.000	3.0000
1.400	3.0000	3.000	3.0000	4.600	3.0000		
1.600	3.0000	3.200	3.0000	4.800	3.0000		

Orifice Manhole: S64, DS/PN: 1.012, Volume (m³): 100.1

Diameter (m) 0.135 Discharge Coefficient 0.600 Invert Level (m) 125.500

Complex Manhole: 112, DS/PN: 1.014, Volume (m³): 7.6

#### Hydro-Brake® Optimum

Unit Reference	MD-SHE-0138-1000-1500-1000
Design Head (m)	1.500
Design Flow (l/s)	10.0
Flush-Flo™	Calculated
Objective	Minimise upstream storage
Application	Surface
Sump Available	Yes
Diameter (mm)	138
Invert Level (m)	125.234
Minimum Outlet Pipe Diameter (mm)	225
Suggested Manhole Diameter (mm)	1200

#### Control Points      Head (m)    Flow (l/s)

Design Point (Calculated)	1.500	10.0
Flush-Flo™	0.441	10.0
Kick-Flo®	0.933	8.0
Mean Flow over Head Range	-	8.7

The hydrological calculations have been based on the Head/Discharge relationship for the Hydro-Brake® Optimum as specified. Should another type of control device other than a Hydro-Brake Optimum® be utilised then these storage routing calculations will be invalidated

**To:** Chris Finneran  
**Cc:** Wastewater Developer Services  
**Subject:** Pre Development Enquiry for Church Rake, Chipping - Our ref - DE2891

**Importance:** High

Chris

We have carried out an assessment of your application which is based on the information provided; this pre development advice will be valid for 12 months

### **Foul**

Foul will be allowed to drain to the public combined sewer network at an unrestricted rate.

### **Surface Water**

Surface water from this site should drain to either soak away or directly to watercourse. Discharge rates and consents must be discussed and agreed with all interested parties.

### **Connection Application**

Although we may discuss and agree discharge points & rates in principle, please be aware that you will have to apply for a formal sewer connection. This is so that we can assess the method of construction, Health & Safety requirements and to ultimately inspect the connection when it is made. Details of the application process and the form itself can be obtained from our website by following the link below

<http://www.unitedutilities.com/connecting-public-sewer.aspx>

### **Sewer Adoption Agreement**

You may wish to offer the proposed new sewers for adoption. United Utilities assess adoption application based on Sewers adoption 6<sup>th</sup> Edition and for any pumping stations our company addenda document. Please refer to link below to obtain further guidance and application pack:

<http://www.unitedutilities.com/sewer-adoption.aspx>

Please be aware that on site drainage must be designed in accordance with Building Regulations, National Planning Policy, and local flood authority guidelines, we would recommend that you speak and make suitable agreements with the relevant statutory bodies.

*Please note, if you intend to put forward your wastewater assets for adoption by United Utilities, the proposed detail design will be subject to a technical appraisal by an Adoption Engineer as we need to be sure that the proposals meets the requirements of Sewers for adoption and United Utilities Asset Standards. The proposed design should give consideration to long term operability and give United Utilities a cost effective proposal for the life of the assets. Therefore, further to this enquiry should you wish to progress a Section 104 agreement, we strongly recommend that no construction commences until the detailed drainage design, submitted as part of the Section 104 agreement, has been assessed and accepted in writing by United Utilities. Any works carried out prior to the technical assessment being approved is done entirely at the developers own risk and could be subject to change.*

Regards
