FAO Rebecca Bowers

Thornley with Wheatley PC has considered this planning application and wishes to make the following comments/observations

- The existing Golf Practice Bay Shelter is a substantial building which is very evident on the landscape being situated high on Jeffrey Hill and even more prominent when illuminated as it is most evenings
- The proposed extension would substantially increase the visual impact in this rural location. Th design indicates that this structure will be enclosed and we therefore assume it will not add to the light emissions
- The existing roof of the Shelter is finished with profiled metal cladding - colour Juniper Green and the walls are vertical over-lapped timber boarding. The plan of the extension shows that both walls and roof are to be finished in metal cladding therefore visually different to the existing building

We would be grateful if you would take our comments into consideration.

Kind regards

Carol Ansbro
Clerk to TwW Parish Council
