

SOME OF OUR EQUAFLOW PROJECTS

Relevant Pages

Equaflow Full Bed Water Management

- Highly consistent factory formed sub base
- Minimal levelling of site base required
- Large attenuation capacity available in order to withstand a 100 year storm event without compromising the surface layer. All discharge controlled and reused to irrigate surface, sent to storage or controlled discharge
- Capable of storing water for other uses e.g. grassland irrigation, wash down areas, toilets
- Wicking technology maintains optimum moisture content in the surfacing
- Around a 20 fold reduction in truck cycles
- Manufactured from recycled materials minimising environmental impact.
- Modular design offers excellent adaptability to cope with any terrain by providing upfill where required utilising Permavoid modular high strength plastic structural 'blocks' that have a high tensile lateral interlocking tie arrangement to create a structurally competent raft.

Equaflow Full Bed Infiltration

- No excavations necessary – particularly important in sensitive areas e.g.
