Hiya,

Railings to be attached to stone wall by drilling 3no, 6mm diameter holes to a depth of 50mm into the mortar bed at each of the two ends of the railing.

Plastic plugs will be inserted into the holes.

40mm screws will then be passed through holes in the end plate of the railings and fastened into the plugs.

Hope that's ok.

John.

Thanks John,

Also please could you write a blurb about fixing the railings to the walls i.e. what type and size of screw we will be using?

Thank you for your help and patience John

Hiya Mr.

Scale drawing as requested.

John.
