

Photographic Record of Defects - Part B

Survey Date	Friday 30th April 2021
Time of Survey	10.45am – 12pm
Weather Conditions	Dry, 9 degrees C

METHODOLOGY OVERVIEW

To provide a more managed approach to identifying any defects, the highway was divided up into several 20 metre long sections, numbered from 1 to 7. Each section was measured using a white tape measure (as is visible in the overview photos for each section).

Section 1 being nearest to the main school entrance point/junction with the main road and section 7 being nearest to the school playing fields where the proposed 3G pitch is to be constructed.

The location of the 7 sections are illustrated on the scale drawing '**SSL2277 12 Highways Condition Survey**' which accompanies this document.

A written description and photographic record of the defects within each section is provided below. It should be noted that where there are numerous potholes/defected or deteriorating macadam within close proximity, an overall rectangular area has been identified - in practice should these areas be rectified, an overall rectangle would be cut out and replaced rather than attempting a large number of individual rectifications.

Note

Due to file upload sizes permissible on the Planning Portal, the Photographic Record is divided into two parts:

Part A - records highway sections 1 to 3

Part B - records highway sections 4 to 7
