- Drawing 3 – G7478.04.18 Ribble Valley District Post Development Habitats

Executive Summary

1. TEP was commissioned by United Utilities to undertake a Biodiversity Net Gain (BNG) assessment of the Haweswater Aqueduct Resilience Programme. This report covers the BNG assessment of land within the boundary of Ribble Valley Borough Council only.
2. Full details of the proposed Marl Hill Section, its location and supporting ecological information is found within Chapter 9 of the Environmental Statement.
3. The Biodiversity Net Gain exercise has been completed using the Natural England Biodiversity Metric (v2.0) and has been completed with reference to the Biodiversity Net Gain Good Practice Principles for Development.
4. All habitats to be lost are to be re-instated to the same condition following completion of works with the exception of some small areas of new access track, hard standing and buildings which are required for the permanent maintenance and monitoring of the aqueduct. Habitat enhancement is proposed but is detailed separately within a report produced by WSP (REF: RVBC-MH-APP-008_02).
5. Based on an assessment of habitats to be lost and those to be reinstated to their current condition, and in the absence of habitat enhancement proposals, there is an overall biodiversity net loss of 15.04% for habitats and 46.09% for hedgerows.
6. This report should be read in conjunction with WSP report (REF: RVBC-MH-APP-008_02) for full details of final habitat losses and gains, once habitat enhancement proposals have been incorporated.

1.0 Introduction

Project Background

- 1.1 TEP was commissioned by United Utilities to undertake a Biodiversity Net Gain (BNG) assessment of the Haweswater Aqueduct Resilience Programme. This report covers the BNG assessment of land within the boundary of Ribble Valley Borough Council only (henceforth referred to as 'the site').
- 1.2 The section within the Ribble Valley Borough Council boundary includes the following areas:
 - Bonstone Compound;
 - Braddup Compound; and
 - Ribble Crossing.
- 1.3 Full details of the proposed Marl Hill Section can be found within the Environmental Statement for the project¹.
- 1.4 The site, as assessed within this document, covers an area of 55.06ha. This is based on the designs provided at the time of assessment. The site boundary is shown in both the pre and post development BNG maps provided within the drawings at the end of this report.
- 1.5 All habitats to be lost are to be re-instated to the same condition following completion of works with the exception of some small areas of new access track, hard standing and buildings which are required for the permanent maintenance and monitoring of the aqueduct. Habitat enhancement is proposed but is detailed separately within a report written by WSP (REF: RVBC-MH-APP-008_02).

Biodiversity Net Gain

- 1.6 Paragraph 170(d) of the revised NPPF states that "Planning policies and decisions should contribute to and enhance the natural and local environment by... minimising impacts on and providing net gains for biodiversity..." The Government 25-year Environment Plan states that government will "embed environmental net gain principle for development".
- 1.7 In July 2019, the government issued revised planning practice guidance (PPG) with details on how planners can implement "net environmental gain" requirements when assessing development proposals, including new advice on protecting wildlife.
- 1.8 In terms of measuring net gain, the guidance states that using a metric is a pragmatic way to calculate the impact of a development and the net gain that can be achieved. It goes on to state that "tools such as the Defra biodiversity metric can be used to assess whether a biodiversity net gain outcome is expected to be achieved".

¹ Haweswater Aqueduct Resilience Programme - Terrestrial Ecology Chapter (ES Volume 4) Doc Ref: HBC_RBC_BMBC-HW-ES-009-01.

- 1.9 Biodiversity Net Gain is the end result of a process which is designed to ensure that there is an increase in biodiversity when the value of habitats prior to and post development are considered.
- 1.10 The process of BNG is designed to align with the mitigation hierarchy to ensure that firstly loss is avoided, secondly loss is minimised and thirdly lost habitats are restored or mitigated for on-site. Where this is not possible and as a last resort remaining losses must be compensated for off-site.
- 1.11 The impact on biodiversity within this site has been calculated using the Natural England biodiversity metric (v2.0)², which is discussed in detail within the methods section below. The metric provides a way to measure biodiversity loss and gain in a consistent and robust way. It can also predict the likely effectiveness of creating new or enhancing existing habitats.

Aims and Objectives

- 1.12 This report aims to:
- Set out the ecological surveys undertaken to establish a baseline position of biodiversity;
 - Provide a biodiversity impact assessment result of the site detailing whether the development will likely achieve net gain, net loss or no net loss of biodiversity; and
 - Detail the mitigation required to compensate for the impact of the development.

Relevant Legislation and Policy

- 1.13 Legislation and policies relevant to this report are shown in Chapter 9, Table 9A.1 of the ES chapter.

² Natural England (2010). The Biodiversity metric 2.0 Auditing and accounting for biodiversity. 2019

2.0 Methods

BNG Assessment

- 2.1 The Site has been assessed using the Natural England biodiversity metric (v2.0) in line with the user guide³ and technical supplement⁴ provided.
- 2.2 The biodiversity metric (v2.0) is a tool designed to enable developers to measure the change in biodiversity across their site. It determines if there will be net gain, net loss or no net loss of biodiversity following completion of their development and any subsequent management regime.
- 2.3 In order to calculate the change in biodiversity across the site a site survey is undertaken by a suitably qualified ecologist to determine the habitats present on site, their location, size, condition and connectivity. This information is then digitised and the resulting information fed into the biodiversity metric (v2.0).
- 2.4 The principles of biodiversity net gain as set out in the Biodiversity Net Gain Good Practice Guidelines⁵ have been considered throughout this process as listed below:
- 1. Apply the mitigation hierarchy;
 - 2. Avoid losing biodiversity that cannot be offset by gains elsewhere;
 - 3. Be inclusive and equitable;
 - 4. Address risks;
 - 5. Make a measurable net gain contribution;
 - 6. Achieve the best outcomes for biodiversity;
 - 7. Be additional;
 - 8. Create a net gain legacy;
 - 9. Optimise sustainability;
 - 10. Be transparent.

Data Sources

- 2.5 The data used to inform the metric, as assessed within this document, have been informed by detailed site survey and a thorough desk-based assessment of habitats present and proposed.
- 2.6 Pre-development habitats which fall within or adjacent to the indicative Development Envelope were surveyed across the 2019 and 2020 season. Extended Phase 1 habitat survey methods were undertaken in line with JNCC⁶ and CIEEM Guidelines⁷. Full details of habitats across the site are found within the Phase 1 Habitat Appendix⁸

⁸ HARP - Proposed Haslingden and Walmersley Section Phase 1 Habitat Appendix March 2021. Doc No: HBC_RBC_BMBC-HW-TA-009-01-02, Rev 1.0

- 2.7 Condition assessment of the habitats present pre-development was undertaken by a suitably experienced ecologist. The condition assessments were calculated through consultation with the original habitat surveyor with reference to site and aerial photography and the guidance presented in the Biodiversity Metric 2.0 - Technical Supplement.
- 2.8 Phase 1 habitats were converted to UK Habitat classification code⁹ in line with the conversions provided in the 'Technical Data' button in the calculation tool of the Natural England biodiversity metric (v2.0)
- 2.9 Strategic significance was determined through a thorough desktop review of local planning policy and other relevant documentation. The desk based assessment¹⁰ provides full details of all local policy and legislation covering the sites.
- 2.10 For the purpose of the BNG assessment particular reference has been paid to the relevant core strategy and other ecology specific policies. Consideration has also been given to the location of Lancaster's Biological Heritage Sites (BHS's) as well as county wide and nationally designated wildlife sites, specifically where they are referenced in local policy as providing important connectivity.
- 2.11 Those sites which fall within the green infrastructure policy, within a designated/locally protected wildlife site or sites which fall within other ecology specific local policy are awarded high strategic significance. Those which fall partially within these areas or are directly adjacent are awarded moderate strategic significance and those outside of these areas are awarded low strategic significance.
- 2.12 Post development calculations have been based on assessment of proposals provided by United Utilities. The post development proposals are shown within drawing G7478.04.018 at the end of this report.

Limitations and Assumptions

- 2.13 For the purpose of this assessment it is assumed that all habitats across the site will be subject to total loss during the development but will be reinstated following completion of works to an equal condition as measured during the baseline survey. The exceptions to this are any retained trees and some small areas of permanent loss which will form new permanent access roads, hard standing and buildings essential to the continued maintenance of the proposed aqueduct.
- 2.14 Habitat connectivity values were assigned according to the metric default assumptions, based on habitat distinctiveness scores. Connectivity is assumed to be medium for high and very high distinctiveness habitats and low for low and medium distinctiveness habitats.

Baseline Limitations and Assumptions

- 2.15 No limitations were encountered during the on-site extended Phase 1 habitat survey.

⁹ UK Habitat Classification: [ukhab – UK Habitat Classification](#) (Accessed 12/04/21)

¹⁰ HARP - Proposed Haslingden and Walmersley Section Deskbased Appendix, September 2020. Appendix 9A.1

- 2.16 A variety of weather conditions were encountered during the survey work however none were adverse enough to impact negatively on the completion of the survey work.
- 2.17 Following discussion between site surveyor and the ecologist completing this report, where there was any doubt on a condition assessment criteria during the condition assessment a higher quality condition has been assumed.
- 2.18 The condition assessment for trees has been based on the tree categorisation within the Arboricultural assessment¹¹ for the site with those which are category A being given good condition, those which are category B moderate condition and those which are category C or U Poor condition.
- 2.19 For the purpose of this assessment where tree canopy cover is above other habitats, the area of tree canopy cover only has been counted and habitats beneath excluded. For tree groups and scattered trees the size of the canopy has been taken as the root protection area given within the Arboricultural assessment.
- 2.20 The Arboricultural assessment includes three tree categories; tree loss, retained trees and trees which may be lost but will be sought to be retained. For the purpose of this assessment a worst case scenario has been anticipated and all trees that may be lost have been included as a loss.

Post-Development Limitations and Assumptions

- 2.21 It is assumed that all habitats to be lost can be reinstated in their current position and can be subject to suitable management to achieve a condition identical to that which was achieved pre-development.
- 2.22 It has been assumed that trees are to be replaced on a 3 to 1 basis. Newly planted trees have been given an assumed canopy cover of 1m².
- 2.23 There is no on or off-site mitigation considered in this report above re-instatement of habitats lost to their current condition. Mitigation for habitat losses is considered separately within a report produced by WSP (REF: RVBC-MH-APP-008_02).

3.0 Results

Biodiversity Impacts

Irreplaceable Habitats

- 3.1 Veteran trees and areas of Upland Hay Meadow, which are irreplaceable habitats, have been identified on site and cannot be compensated for within the biodiversity metric. Bespoke compensation for the loss of these habitats is provided within the Environmental Statement for the project.

Baseline

- 3.2 The baseline habitats drawing (TEP Ref: G7478.004.017) illustrates the habitats present across the site. Tables 1-3 list the habitats present, their Phase 1 habitat code and reclassified UK Habitat classification (UK Hab) code with their associated conditions and also provides a summary of how this assessment was derived.
- 3.3 There are, in some compound areas in the tables below, more than one line per habitat type. This reflects the lines in the BNG metric which are split out into those habitat types with different condition scores and strategic significance. For example there may be two areas of scrub, both which are of moderate condition, however one has high strategic significance and the other low. To identify each different area within the metric and be able to reference it to the table below, a separate column for the area has been included.
- 3.4 Drawing TEP Ref: G7478.004.017 also illustrates the location of the hedgerows. Table 4 lists the hedgerows present within the application area, their Phase 1 habitat code and reclassified UK Habitat classification code with their associated conditions and provides a summary of how this assessment was derived.
- 3.5 The comments box in the tables below offers further justification of the condition, based on the technical guidance document for the metric and also based on the surveyors own ecological knowledge. Relevant target notes (TN's) are provided where available however not all individual sections of each habitat had a TN conferred onto them.

Table 1: Baseline Habitats, UK Hab - Bonstone Compound

UK Hab Type	Associated Phase 1 Code	Area (ha)	Condition assessment ¹²	Associated Condition	Comments
Grassland - Modified grassland	Poor semi-improved grassland	6.61	<p>1. The area is clearly and easily recognisable as a good example of this type of habitat and there is little difference between what is described in the relevant habitat classifications and what is visible on site. NOT MET</p> <p>2. The appearance and composition of the vegetation on site should very closely match the characteristics for the specific Priority Habitat [i.e as described by either the Phase 1 Habitat Classification or the UK Habitat Classification], with species typical of the habitat representing a significant majority of the vegetation. NOT MET</p> <p>3. Wildflowers, sedges and indicator species for the specific Priority grassland habitat are very clearly and easily visible throughout the sward and occur at high densities in high frequency. See relevant Habitat Classification for details of indicator species for specific habitat. NOT MET</p> <p>4. Undesirable species and physical damage is below 5% cover. NOT MET</p> <p>5. Sparsely vegetated land - ruderal/ephemeral	Tall ruderal	0.09	<p>This habitat is not grass dominated so does not fall within the grassland habitat and does also not meet the criteria of Open Mosaic Habitat on Previously Developed Land (OMH). It is therefore assessed as ruderal habitat within the sparsely vegetated and rock habitat type.</p> <p>This ruderal habitat is dominated by undesirable species including nettle. It has low biodiversity value and therefore is assigned as being in poor condition.</p>	poor	<p>Relevant TN's: N/A</p> <p>Species poor ruderal habitat with presence of undesirable species more than 10%.</p>
Urban - Developed land; sealed surface	Buildings and hard standing	0.48	No condition assessment required.	N/A - Other	<p>Relevant TN's: N/A</p> <p>An existing area of hard standing and buildings. No condition assessment required</p>

UK Hab Type	Associated Phase 1 Code	Area (ha)	Condition assessment ¹³	Associated Condition	Comments
Urban - Vacant/derelict land/ bareground	Bareground	0.01	<p>1. Known history of disturbance at the site or evidence that soil has been removed or severely modified by previous use(s) of the site. Extraneous materials/substrates such as industrial spoil may have been added which in turn has led to a low nutrient environment. NOT MET</p> <p>2. The site contains some vegetation. This will comprise of early successional communities consisting mainly of stress-tolerant species (e.g. indicative of low nutrient status or drought). Early successional communities are composed of (a) annuals, or (b) mosses/liverworts, or (c) lichens, or (d) ruderals, or (e) inundation species, or (f) open grassland, or (g) flower-rich grassland, or (h) heathland.</p> <p>3. The site contains unvegetated, loose bare substrate and pools may be present and desirable. NOT MET</p> <p>4. The site shows spatial variation, forming a mosaic of one or more of the early successional communities (a)–(h) above plus bare substrate or pools. NOT MET</p>	Poor	<p>Relevant TN's: N/A</p> <p>An existing area of bareground.</p>

UK Hab Type	Associated Phase 1 Code	Area (ha)	Condition assessment ¹³	Associated Condition	Comments
Woodland and forest - Other woodland; mixed	Plantation mixed woodland	0.06	1. This should be an area of trees with complete canopy cover. 2. Native species are dominant. Non-native and invasive species account for less than 10% of the vegetation cover. NOT MET 3. A diverse age and height structure of the trees. NOT MET 4. Free from damage [Bark stripping; Browse line; Damage shoot tips] (in the last five years) from stock or wild mammals with less than 20% of vegetation being browsed. 5. There should be evidence of successful (i.e. not browsed off before it gets well established) tree regeneration such as seedlings, saplings and young trees. NOT MET 6. Standing and fallen dead wood of over 20 cm diameter are present including fallen large dead branches/stems and stumps. 7. Wetland habitat if they exist within the wood has little sign of drainage or channel straightening. 8. The area is protected from damage by agricultural and other adjacent operations. 9. There should be no evidence of inappropriate management (e.g. deep ruts, animal poaching or compaction). 10. Invasive non-native plants are below 5% (see list below). NOT MET 11. No signs of significant nutrient enrichment present.	poor	Relevant TN's: TR4.TN41 Semi-mature mixed plantation woodland to the north of an access track which is fenced off. The understory is dominated by mature and dense rhododendron growth
Woodland and forest - Other woodland; broadleaved	Scattered trees	0.39	Scattered trees - No condition assessment required	good	Category A trees within the Arboricultural report.
Woodland and forest - Other woodland; broadleaved	Scattered trees	0.36	Scattered trees - No condition assessment required	moderate	Category B trees within the Arboricultural report.
Woodland and forest - Other woodland; broadleaved	Scattered trees	0.05	Scattered trees - No condition assessment required	poor	Category C/U trees within the Arboricultural report.

Post-development Biodiversity

- 3.6 The areas of Grassland - Upland hay meadows identified in Table 1 above is an irreplaceable habitat and cannot be compensated for within the biodiversity metric. The Environmental Statement for the project confirms that this hay meadow is to be retained and protected during development.
- 3.7 As shown in the BNG metric all other habitats to be lost will be reinstated to the same condition they achieved during the baseline assessment. The exceptions to this are any retained trees and some small areas of permanent loss which will form new permanent access roads, hard standing and buildings essential to the continued maintenance of the proposed aqueduct.
- 3.8 An Ecological Management Plan will be committed to, which will provide detailed prescriptions for ongoing management of existing and new habitats. Measures will be detailed of how habitats can be reinstated to their current level and the required management practices to maintain this.

Overall Biodiversity Change

- 3.9 The results of the assessment are set out below. The calculator provides baseline units for the habitats, hedgerows and trees, with the total net unit change and total net percentage change post development.
- 3.10 The baseline habitat units for the site are 131.65, following development the habitat units on-site will be 111.85. Baseline hedgerow units are 13.47, following development the hedgerow units on-site will be 7.26.
- 3.11 The completed metric is presented as a separate document. A summary of the total net change is provided in Figure 1 below.

On-site baseline	<i>Habitat units</i>	131.65
	<i>Hedgerow units</i>	13.47
	<i>River units</i>	0.00
On-site post-intervention (Including habitat retention, creation, enhancement & succession)	<i>Habitat units</i>	111.85
	<i>Hedgerow units</i>	7.26
	<i>River units</i>	0.00
Off-site baseline	<i>Habitat units</i>	0.00
	<i>Hedgerow units</i>	0.00
	<i>River units</i>	0.00
Off-site post-intervention (Including habitat retention, creation, enhancement & succession)	<i>Habitat units</i>	0.00
	<i>Hedgerow units</i>	0.00
	<i>River units</i>	0.00
Total net unit change (including all on-site & off-site habitat retention/creation)	<i>Habitat units</i>	-19.80
	<i>Hedgerow units</i>	-6.21
	<i>River units</i>	0.00
Total net % change (including all on-site & off-site habitat creation + retained habitats)	<i>Habitat units</i>	-15.04%
	<i>Hedgerow units</i>	-46.09%
	<i>River units</i>	0.00%

Figure 1: BNG Headline Results Summary Table

- 3.12 As can be seen in the above figure there is a biodiversity net habitat unit loss of 19.80 habitat units which equates to an overall biodiversity net loss of 15.04%.
- 3.13 Hedgerow unit losses will be 6.21 units equating to an overall biodiversity net loss of 46.09%.

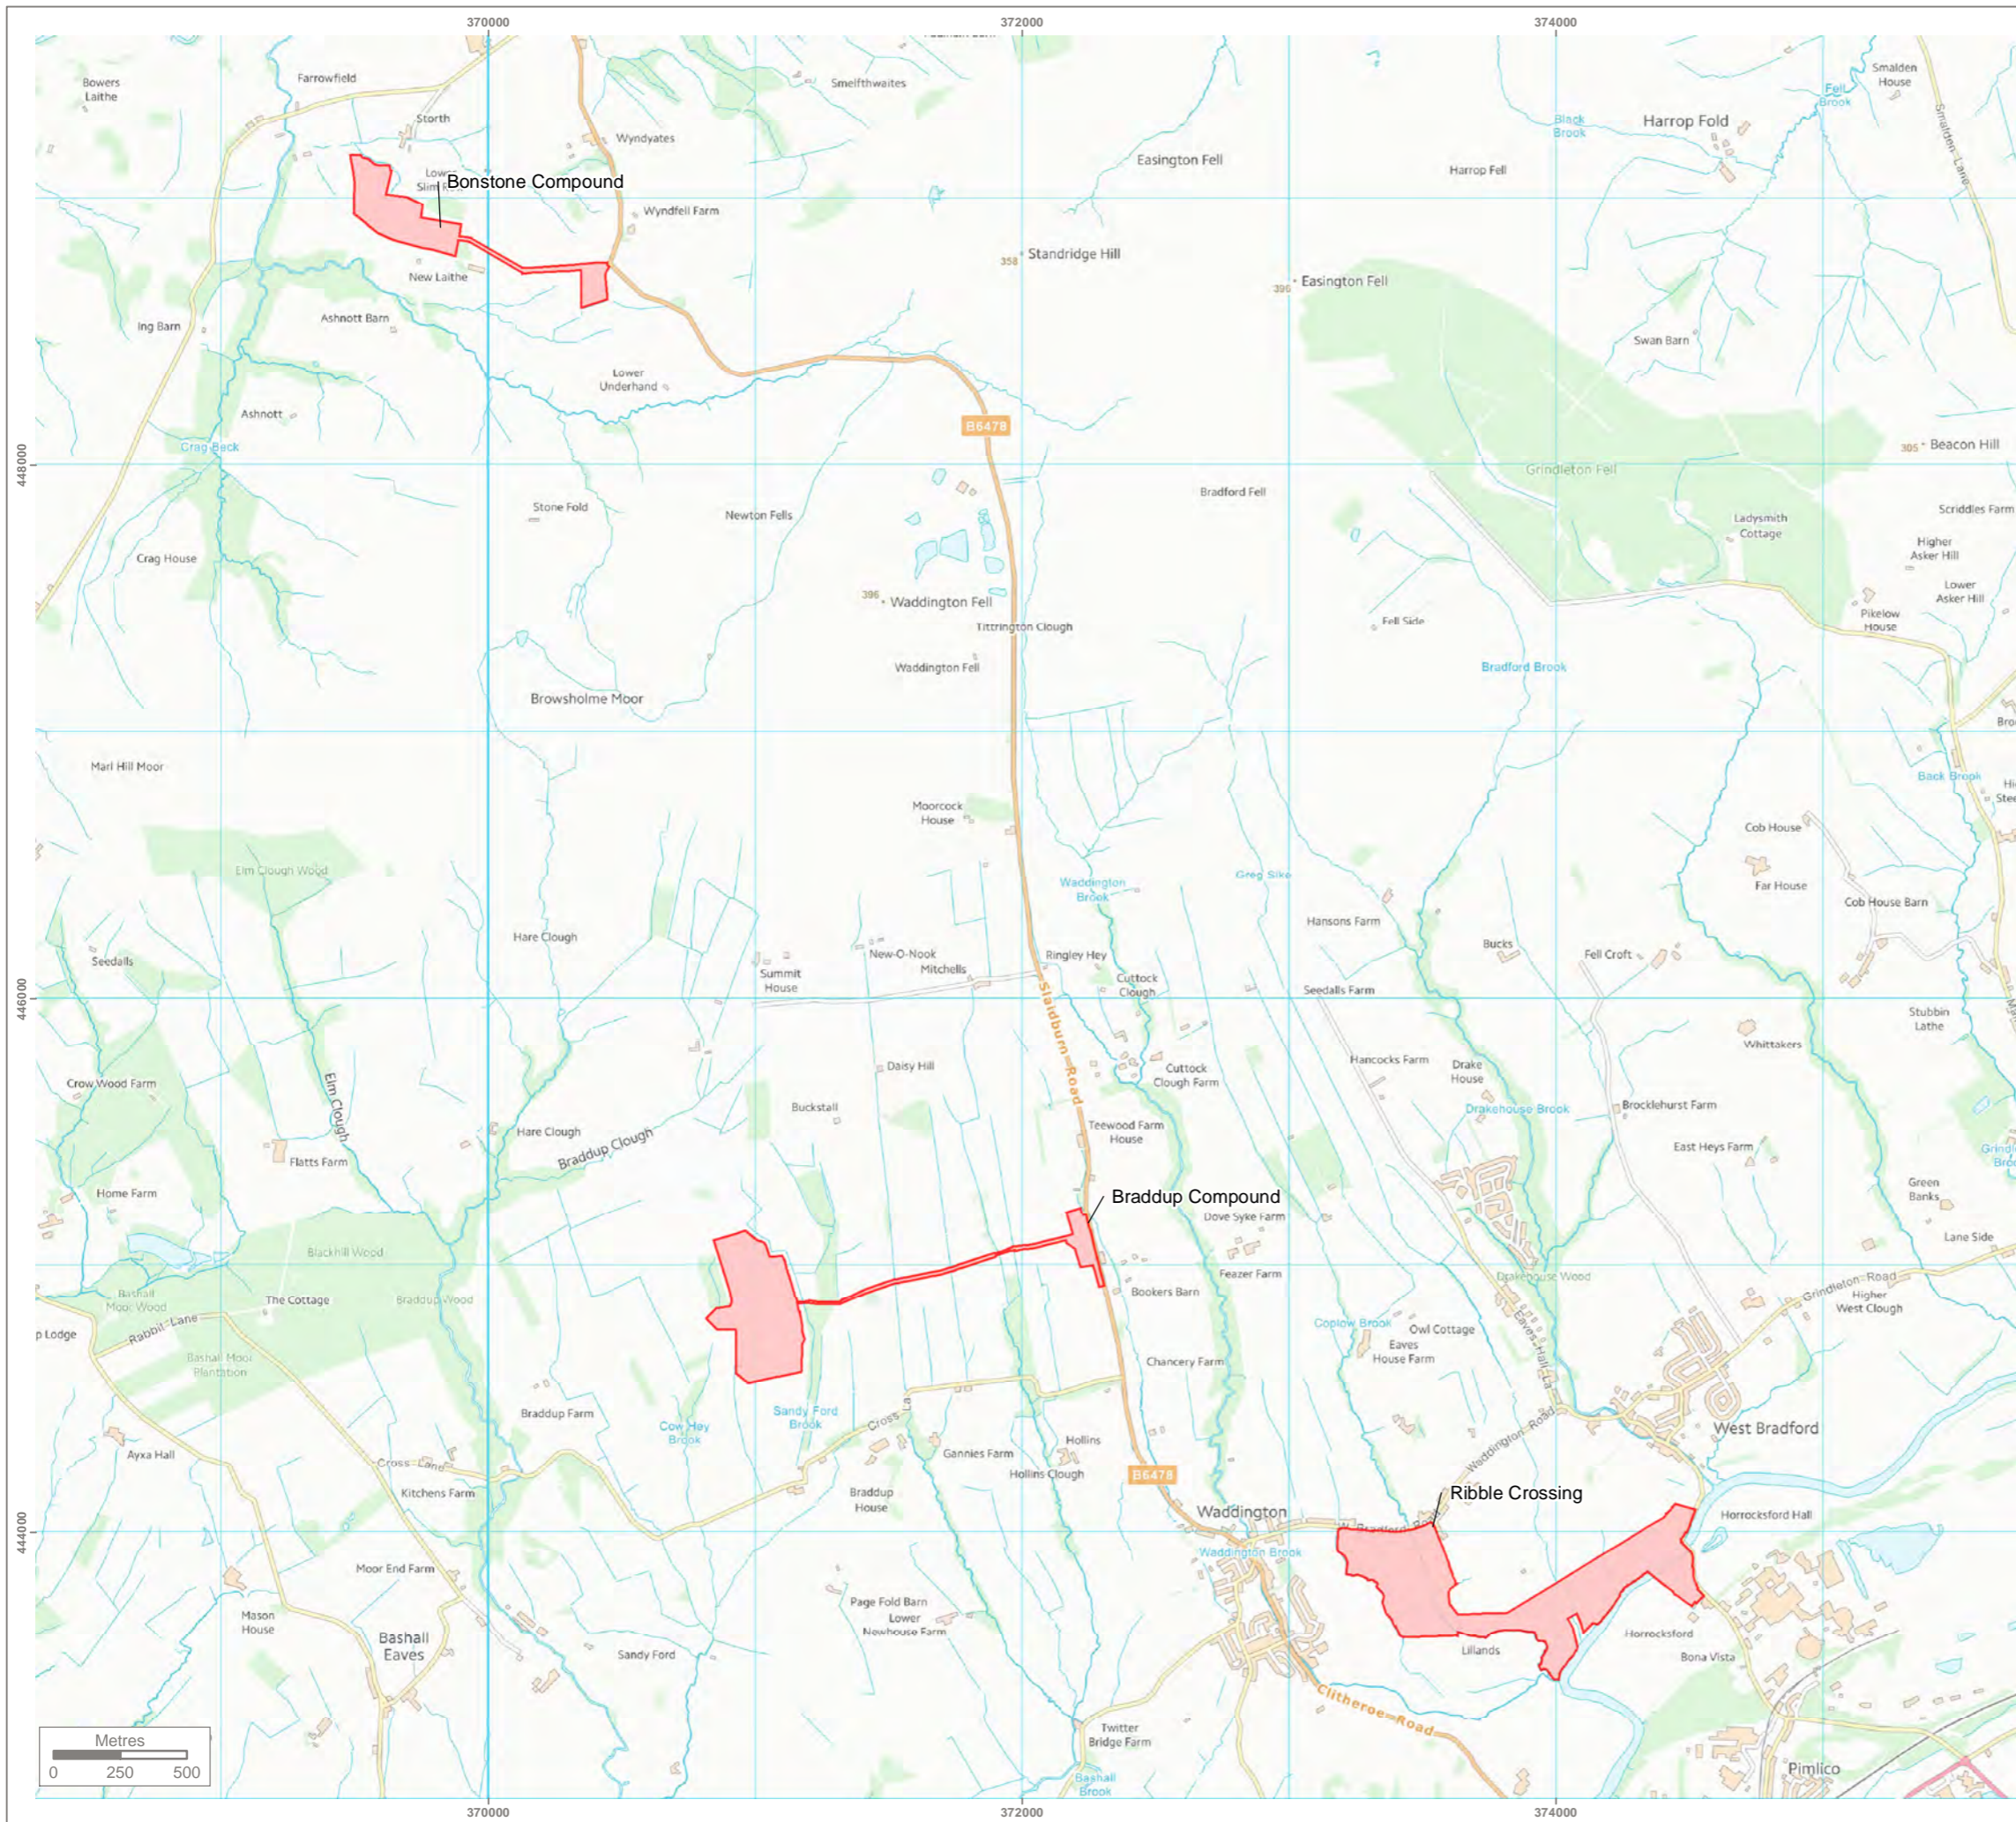

4.0 Conclusions

- 4.1 There is an overall biodiversity net loss of 15.04% for habitats and 46.09% for hedgerows from the development. Under the current requirements of National Planning Policy Framework (NPPF) a development must achieve net gain. NPPF does not state what percentage net gain must be achieved.
- 4.2 The draft Environment Bill includes a requirement for 10% net gain on all developments, however, this is yet to be passed through Parliament.
- 4.3 It is understood this document is to be considered by the Greater Manchester Ecology unit (GMEU) whose latest guidance¹⁵ requires all new development to aim to:
 - Deliver net gains in biodiversity using the Biodiversity Metric 2.0 to demonstrate the gain and contributing to Local Plans and local biodiversity and green infrastructure plans, strategies and policies; and
 - Describe how they have met the requirements set by the Biodiversity Net Gain Good Practice Principles as part of any planning application.
- 4.4 The losses in this report reflect those within the Ribble Valley Borough Council area only. This report does not take account of the mitigation to be created off site and therefore, as a stand-alone document, does not accurately reflect the change in biodiversity across the site. This document should be read in conjunction with WSP document (REF: RVBC-MH-APP-008_02) which details the proposed mitigation measures and provides a final change in biodiversity score.

¹⁵ GMCA Biodiversity Net Gain Guidance for Greater Manchester February 2021, WSP, Footprint Ecology.
