PRELIMINARY RISK ASSESSMENT (DESK STUDY)

INTRODUCTION

A mixed commercial and residential development is proposed. The objective is to carry out a Preliminary Risk Assessment to consider contamination, landfill gas and geotechnical issues.

SITE DESCRIPTION

The site is 'L' shaped, about 40 by 30 metres, located to the southwest of Berry Lane in Longridge and at OS Grid Reference 360248, 437500. The site, inspected on 29/09/2021 by Mrs E Whitaker, comprises several buildings labelled sections (shown on the map) as follows:

- A = A car garage, built of concrete block with asbestos cement roof.
- B = Shop storage, building, paints, e.g. concrete block wall with asbestos cement roof.
- C = Outdoor garden centre area on a concrete surfaced yard, with gas canisters, sloping very gently down to the northeast.
- D = Polytunnel, on a concrete surfaced yard.
- E = Fire damaged hardware store, built of stone.
- F = Rear of the hardware store, concrete block walls and asbestos roof. Source of the fire, with extensive fire damage, causing sections of the roof to collapse. There are many paint cans, and other material/items (unidentified due to fire damage). To the southeast of this area is a small room, containing two paraffin containers, which do not appear to be fire damaged.

To the north is a petrol station, to the southeast and northwest are shops/commercial properties, to the south are bungalows and to the southwest a garage workshop. The area slopes down to the southwest.

PROPOSED DEVELOPMENT

It is proposed to build two buildings. At the southwest will be a block of two retail units and at the centre/northeast a 'L' shaped block of four retail units, at ground level. First floor level will be a series of six apartments. There will be a yard/path between the buildings and no landscaping or car parking.

LEGAL/COPYRIGHT

Material may be included in this report from Ordnance Survey (Licence No. AL100031635), Landmark, Environment Agency, Coal Authority and others. It may be copyright and the usual restrictions apply. This report can only be relied upon if the invoice has been paid promptly and in full. This report may be signed by an individual, but only on behalf of Worms Eye Limited.

NOT INCLUDED IN THE REPORT

- Arboricultural or Invasive Plant Survey (Japanese Knotweed etc.).
- Asbestos Survey
- Mining Risk Assessment.
- Flood Risk Assessment.
- Underground Services Survey.

General comments may be made where they are applicable to the environmental and geotechnical risk assessment. These general comments do not constitute a detailed risk assessment.

DATA SOURCES

The following data sources have been viewed in compiling this report.

- BGS, Geology Map, 1:50000 scale, Solid and Drift Edition
- BGS, on-shore boreholes scans
- Landmark Envirocheck Report, 24/09/21
- Ordnance Survey, Historical Maps, 1:10000 and 1:2500 scale
- Walkover Survey, 29/09/21

This report is referred to as a Preliminary Risk Assessment (PRA), alternative names are 'Phase I' Report (Phase II being the intrusive work involving boreholes etc.) or a Desk Study.

ENVIRONMENTAL DATA

A Landmark Envirocheck report and geological maps have been reviewed, the following is a summary of the combined data. The Envirocheck report indicated none of the following within 250 metres:

- Contaminated land register entries
- Discharge consents
- Pollution incidents
- Water abstraction points (none within 1000m) or Source protection zones
- Landfill sites
- Hazardous substances sites
- Sensitive land uses

Geology of Site

The geological map indicates that the underlying solid rocks are Bowland Shale (mudstone) with Pendle Grit Sandstone just to the southeast.

Surface drift is shown as glacial till (boulder clay) and natural subsidence hazards are shown as very low to no hazard.

Radon

The site is in a lower probability radon area as less than 1% of homes in the area are above the radon action level. Radon protection measures are not required.

Surface Water (Hydrology)

The nearest water course is a short stream/field drain 286m west.

The area slopes down to the southwest, the flow of surface water is expected to be in this direction.

Flooding

Information from the EA flood maps suggests areas where rivers would flood. There are two zones:

- 'normal' flooding, based on a 1 in 100 chance of it happening in any year (1:200 if flooding is from the sea). This is normally closer to the river.
- 'extreme' flooding, further away from the river and having a 1 in 1000 chance.

Flooding can occur for many reasons other than those dealt with by the EA maps. These include:

- burst pipes, blocked drains, sewers and culverts
- inadequate drainage, cloudbursts/flash flooding overwhelming drainage systems

Statements in this report such as 'clear of flooding/flood plain' and 'flooding – no further action' are references to the EA river and sea flood maps and are no guarantee that flooding will not occur.

Groundwater Flooding

The site is shown to be in an area with limited potential for groundwater flooding to occur.

Flooding from Rivers

The site is shown to be clear of flooding from rivers.

Surface Water Flooding

The site is shown to be clear of surface water flooding, with an area at risk of 1 in 30 to 1 in 1000 year surface water flooding immediately northeast.

Groundwater (Hydrogeology)

The solid rocks under the site are indicated as a Secondary A aquifer.

Superficial (drift) deposits are classed as a Secondary Undifferentiated aquifer.

Groundwater flow is likely to follow the topography and move to the southwest.

Filled Ground

Within 250 metres of the site there are the following suspected filled features:

- 35m and 246m north
- 109m east
- 113m, 235m and 243m northwest

Nearby Industry

Booths Service Station, 31m northeast has a Local Authority PPC listing for a petrol filling station.

Longridge Dry Cleaners, 106m east, has a Local Authority PPC listing for dry cleaning.

There are the following trade directory entries within 100m:

- Printers, immediately northwest.
- Hardware, on-site.
- Recycling centre, 17m northwest.
- Car dealers, 32m northeast.
- Distribution services, 36m west.
- Garage services, 36m southwest.
- Tyre dealers, 37m southwest.
- Domestic appliance service/repair, 70m northwest *
- Clothing/fabric manufacturers, 89m west *

* not relevant due to distance/severity/significance

SITE HISTORY

Date	On Site	Off Site
1847 (1:10,560)	Undeveloped	Berry Lane immediately east. Otherwise mostly undeveloped.
1892 (1:2,500)	Shops/houses on northeast of site.	Houses/shops immediately northeast. Cotton mill 20m northeast. Reservoir 15m north, 70m northeast. Gas storage holders at gas works 135m and 145m northwest. Railway (northeast-southwest) 125m southeast with sidings 90m southeast.
1912 (1:2,500)	Little or no change.	No relevant change.
1932 (1:2,500)	Buildings possibly a house, at southwest corner.	Small buildings, possible workshops, 10m south.
1961-7 (1:2,500)	Buildings on northeast and southwest demolished, series of buildings now on south of site.	Buildings to south cleared. Garage, probably with petrol sales, 10msouthwest. New building 10m south. Cotton mill to northeast demolished. Reservoirs to north and northeast, filled. Petrol station 20m north.
1978-87 (1:2,500)	Little or no change.	No relevant change.
1994 (1:2,500)	Building cleared leaving those at the northeast/east and northwest.	No relevant change.
2009 (1:10,000)	Building towards centre.	No relevant change.
2021 (1:10,000)	Little or no change.	No relevant change.

DISCUSSION

Contamination

The site is a fire damaged hardware store and outbuildings. Although a hardware store would not normally be a likely source of contaminants, the fire changes the situation. There are potential contaminants from burned materials (especially PAHs), or from building materials, for instance the asbestos, to be released by the fire and possible spills/leaks of paint etc due to the fire. Fire water will also help to migrate contaminants around the site. However, these are unlikely to be high enough to pose a risk on a fully hard-surfaced development.

A series of small buildings on the south of the site may have been workshops similar to nearby sites. Their use is not known and these are a possible source of contaminants. However, these would also not be expected to be high enough to pose a risk to a hard-surfaced development, bearing in mind also the ground floor will be commercial use.

Potential off-site contamination sources are a petrol station and cotton mill to the north and northeast. The underlying clay will impede the passage of contaminants and these are unlikely to be a significant source of contaminants. A petrol station, garage workshop and workshops to the southwest/south are down the hydraulic gradient, and contaminants would be expected to continue down to the southwest, away from the site. A greater potential for contaminants is expected from site to the north, especially the petrol station. However, there are no significant, reported pollution incidents at the petrol station.

The proposed development will be a mixed commercial/residential development, with re-built building, no landscape, yard and potential pollutant linkages are considered to be:

- Sulphate attack on buried concrete.
- Contaminants entering drinking water pipes.
- Migration of asbestos fibres off-site during construction.

Contaminants may be present at raised levels, however, they are not expected to pose a risk to end-users on a fully hard-surfaced development.

Controlled Waters

There is an underlying Secondary A aquifer beneath clay. There are no nearby water abstraction points or source protection zones. The nearest water course is 286m west.

On completion, the buildings and yard will cover the site thereby eliminating the risk of rainwater passing through the surface soils. Furthermore, the underlying clay will impede the migration of water and contaminants are not expected at very high levels. No risk is expected to controlled waters.

Landfill Gas/Ground Gas

Although there are no landfill sites within 250 metres there are several nearby filled features, including two former reservoirs 15m north and 70m northeast. These are potential sources of ground gases which could migrate to and present a risk to the development.

Bearing in mind the size of the filled areas, distance from the site and underlying clay, it is considered that there is likely to be very low to low risk to the development, especially bearing in mind it will be commercial units at ground level.

Radon

Radon protection measures are not required.

Flooding from Rivers

The Environment Agency maps show that this site is clear of flooding from rivers.

Groundwater and Surface Water Flooding

The site is shown to be clear of areas of surface water flooding, the nearest area at risk being immediately northeast.

The site is shown to be in an area with limited potential for groundwater flooding to occur.

Foundations

It is expected that made ground will be present, with underlying clay. This can provide variable conditions for foundations and a range of options may need to be considered.

If foundations are to be on clay the shrinkage potential of the clay should be determined.

INDUSTRY PROFILE

The site is a fire damaged hardware store and outbuildings. There are potential contaminants from burned materials and building materials from on-site use. Potential off-site contamination sources are, a petrol station and cotton mill to the north and northeast.

Industry	Possible Contaminants
Potential Contaminants	Metals: copper, zinc, chromium, nickel, lead, cadmium, arsenic, Inorganic compounds: cyanide, sulphates Phenols Mineral oils, fuel oils (TPHs) Asbestos General hydrocarbons (PAHs)

CONCEPTUAL MODEL

A conceptual model based on the source-pathway-receptor concept is included to show the potential pollutant linkages with this site. The development is mixed commercial and residential.

Source	Receptors	Pathway	Potential/Likely Pollutant Linkage
Asbestos	End-users *	No pathway	No
	Off-site	Migration off-site	Yes
Inorganic contaminants	End-users	No pathway	No
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Sulphate	Building fabric	Concrete directly in contact with soil	Yes
Hydrocarbons	End-users *	No pathway	No
	Service pipes	Seeping into drinking water pipes	Yes
	Groundwater	Leaching towards	No
	River/stream	Leaching towards	No
Hydrocarbon vapours	End-users *	Inhalation of vapours indoors and outdoors	Unlikely
Landfill gas	End-users - in buildings*	Seeping into buildings, explosion, asphyxiation	Possible
Radon	End-users - in buildings*	Seeping into buildings	No

* Commercial and residential

CONCLUSION

Contamination

Taking into account the history of the site and recent fire it is likely that contamination will be present at raised levels. However, these are not expected to be high enough to pose a risk to end-users on a hard-surfaced development, with commercial use at ground floor, and only a very low risk is anticipated at worst.

An intrusive investigation is required, consisting of boreholes and tests to confirm the presence/absence and extent of contamination on the site. The paraffin tank is a specific point source for contamination and the investigation will need to target this, proposed buildings and provide all round coverage.

Controlled Waters

No risk to controlled water is expected on completion and no further action is considered necessary. This may need to be reviewed following the soil tests.

Landfill Gas/Ground Gas

There are nearby areas of filled ground and a very low to low risk from ground gases is anticipated.

A gas testing programme is required.

Radon

Radon protection measures are not required.

Flooding

The EA maps indicate that the area is clear of flooding from rivers.

The maps indicate that the area is clear of surface water flooding.

These maps are fairly crude and it is beyond the scope of this report to provide a comprehensive flood risk assessment. For greater confidence a detailed flood risk assessment should be obtained.

Foundations

A series of boreholes are required in the area of the proposed building to allow the most suitable foundations to be designed.

Plasticity tests are required to confirm the shrinkage potential of the clay.

Yours faithfully

on behalf of Worms Eye Ltd

1. This report should be considered in relation to the objectives agreed between Worms Eye and the Client, outlined in the introduction.
2. For the work, reliance has been placed on publicly available data, obtained from the sources identified in the report. The information is not exhaustive and further information may be available from other sources. When using the information it has been assumed it is correct, and no attempt has been made to verify the information.
3. This report has been produced in accordance with current UK policy and guidelines, for land and groundwater contamination, enforced by the Local Authority and the Environment Agency.
4. During the site walkover, reasonable effort was made to obtain an overview of the site. However, no attempt was made to enter areas that are unsafe, a risk to health and safety, locked, barricaded, overgrown, or areas not made accessible.
5. Access, the presence of services and activities on the site, limited locations where sampling could be carried out and the techniques that could be used.
6. Assessments are based on available information at the time of writing and are ultimately for the decision of the regulatory authorities.
7. The conclusions and recommendations provide an overview and guidance only and should not be specifically relied upon without considering the context of the report in full.
8. Worms Eye cannot be held responsible for any use of the report or its contents for any purpose other than that for which it was prepared. The copyright of this report, and other plans or documents prepared by Worms Eye, is owned by them, and no such plans or documents may be reproduced, published or adapted without written consent. Complete copies may be made and distributed by the client, as expected, in dealing with matters related to its commission. Should the client pass copies of the report to other parties for information, the whole report should be copied, but no professional liability, or warranties, shall be extended to other parties by Worms Eye, without their written agreement.
9. New information, revised practices, or changes in legislation, may necessitate the re-interpretation of the report, in whole or in part.

Notes

All Dimensions to be checked on site. Walls shown on plans are not to be assumed to be solid & should be checked for thickness, construction, load bearing capacity & stability.

Introduction

The Environment Act 1985 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

10k Raster Mapping

Published 2001

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale Information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Published 1961 - 1967

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Additional SIMs

Published 1981 - 1992

Source map scale - 1:2,500

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1995

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
