

Following on from our conversation earlier we had a look at your tree work. The suppressed sycamore would be best removed, the 2 mature sycamore require minimal crown-lifting to achieve a 6m clearance underneath the whole canopy.

The field is very wet at the moment so we would need to budget half a days work, £200 to remove all the debris as we might have to drag it to the roadside. We would require planning approval from RVBC before work can commence, which should be a simple form filling exercise.

Regards,
Richard
