For the Attention of: Mr S Kilmartin Ribble Valley Borough Council

[By Email: planning@ribblevalley.gov.uk]

21 December 2022

Dear Mr Kilmartin

PLANNING APPLICATION: 3/2022/1129

Retrospective change of use with minor engineering works and associated landscaping works for the reuse of the former railway embankment and track bed to form an informal recreational amenity area in association with the adjacent holiday park; Bridge Hey Wood Caravan Park, Dunkirk Farm, Read, BB12 7RR

Thank you for your consultation letter of 15 December 2022 seeking the views of The Coal Authority on the above planning application.

The Coal Authority is a non-departmental public body sponsored by the Department of Business, Energy & Industrial Strategy. As a statutory consultee, The Coal Authority has a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas.

The Coal Authority Response: Material Consideration

I have reviewed the site location plans and the proposals and supporting information submitted and available to view on the LPA website and can confirm that the site falls within the defined Development High Risk Area.

The Coal Authority records indicate that the site is underlain by recorded shallow coal workings and probable unrecorded underground shallow coal workings. In addition, the records indicate that the application site is likely to have been subject to historic unrecorded coal mine workings at shallow depth associated with a thick coal outcrop. Voids and broken ground associated with such workings can pose a risk of ground instability and may give rise to the emission of mine gases. The site also lies within a Surface Coal Resource Zone. A number of mine entries also lie within close proximity of the application site boundary.

As you will be aware, the Coal Authority's general approach in cases where development is proposed within the Development High Risk Area is to recommend that the applicant obtains coal mining information for the application site and submits a Coal Mining Risk Assessment to support the planning application.

However, when considering this particular proposal, the application is primarily for change of use of land with limited additional earthworks. There will be no operational development resulting from this proposal that materially intersects the ground and could therefore present risks to the coal mining features. Accordingly, we do not consider that a Coal Mining Risk Assessment is necessary for this proposal and **do not object** to this planning application.

However, the Coal Authority does recommend that, should planning permission be granted for this proposal, the following wording is included as an Informative Note on any planning permission granted:

The proposed development lies within an area that has been defined by the Coal Authority as containing potential hazards arising from former coal mining activity. These hazards can include: mine entries (shafts and adits); shallow coal workings; geological features (fissures and break lines); mine gas and previous surface mining sites. Although such hazards are seldom readily visible, they can often be present and problems can occur in the future, particularly as a result of development taking place.

It is recommended that information outlining how the former mining activities affect the proposed development, along with any mitigation measures required (for example the need for gas protection measures within the foundations), be submitted alongside any subsequent application for Building Regulations approval (if relevant).

Any intrusive activities which disturb or enter any coal seams, coal mine workings or coal mine entries (shafts and adits) requires a Coal Authority Permit. Such activities could include site investigation boreholes, digging of foundations, piling activities, other ground works and any subsequent treatment of coal mine workings and coal mine entries for ground stability purposes. Failure to obtain a Coal Authority Permit for such activities is trespass, with the potential for court action.

Property specific summary information on past, current and future coal mining activity can be obtained from: www.groundstability.com or a similar service provider.

If any of the coal mining features are unexpectedly encountered during development, this should be reported immediately to the Coal Authority on 0345 762 6848. Further information is available on the Coal Authority website at: www.gov.uk/coalauthority

Please do not hesitate to contact me if you would like to discuss this matter further.

Yours sincerely

Ashley Langrick

Planning and Development Manager (Corporate Projects)

Disclaimer

The above consultation response is provided by the Coal Authority as a Statutory Consultee and is based upon the latest available coal mining data on the date of the response, and electronic consultation records held by the Coal Authority since 1 April 2013. The comments made are also based upon only the information provided to the Coal Authority by the Local Planning Authority and/or has been published on the Council's website for consultation purposes in relation to this specific planning application. The views and conclusions contained in this response may be subject to review and amendment by the Coal Authority if additional or new data/information (such as a revised Coal Mining Risk Assessment) is provided by the Local Planning Authority or the applicant for consultation purposes.
