Planning Application Reference No.: 3/2024/0377

Address of Development: Grindleton Pavilion, Grindleton

Comments: Grindleton Pavilion is an important hub in the village of Grindleton and provides a range of activities and services to the local community for which it has gained recognition and support via grants. This planning application is important to enable The Pavilion to continue to offer its services, to remain solvent and to do so in a sustainable way. The requested application and forms of solar panels is a compelling case for best use of funds, maximises the solar panel potential and does so in an environmentally way, in keeping with a conservation area. I fully support this development.

I am writing in support of the above Planning Application submitted by Grindleton Recreation Ground Charity.

This is a long established charity dedicated to benefitting the village of Grindleton and the local area. It is a very forward thinking organisation and when it built the Pavilion it incorporated a ground source heat pump to alleviate its energy costs.

The Charity has now secured a grant to enable solar panels to be fitted to the roof. This will again be of much benefit in reducing energy costs. It will also be playing its part in helping Britain move towards sustainable clean energy and I urge the Planning Authority to grant a permit for this worthwhile cause.

Yours sincerely

Address of Development: Grindleton Pavilion
Sawley Road
Grindleton

Comments: I very much support this project being undertaken by Grindleton Recreation Ground Charity who provide a much needed community hub for village residents and the Ribble Valley residents. No doubt energy costs will have increased over recent years and to ensure Grindleton Pavilion can remain financially robust this type of project, whilst also improving the village carbon footprint should be supported.

Comments: I strongly believe that the submitted plans to place solar panels to the edge of the roof will not only give the best value for the investment and return going forward, but also aesthetically give the best result. Importantly, at a time of imminent climate crisis, generation and sustainability of green energy is far more important to humanity than any other considerations. Many buildings do not have the opportunity to generate 'free' energy because of their location - Grindleton Pavilion is not one of these. Given that fact, it is clear that the maximum energy generated here is an environmental imperative, as well as being an excellent and ecologically sensitive idea.

Comments: [REDACTED] I am commenting on behalf of 50 [REDACTED] who have agreed that they support the application that the full amount of solar panels requested be fitted in order that the maximum amount of electricity as possible be generated.
It would seem sensible to fit the panels to the edge of the roof, and would be more aesthetically pleasing, particularly as the building is quite new.

Comments: As part of the community I support the planning application for solar panels to be fitted to the Village Pavilion. The panels that are being put forward will be more sympathetic to the building & its situation within the AONB. The panels will be more energy efficient, allowing the Pavilion to make and store energy, and in so doing, making the energy bills easier to pay as well as having the potential to feed back excess energy back into the National Grid. Having solar panels fitted is in line with the ethos of the village. We are becoming increasingly eco aware and these panels will enable the community building to become more sustainable. This will hopefully help in protecting our community for generations to come.
