Planning Application Reference No.: 3/2001/0444

Address of Development: Grindleton Pavilion & Recreation Ground, Sawley Rd, Grindleton BB74QS

Comments: As **Comments:** As **Community** & frequent users of the community facilities at Grindleton Pavilion Recreation Ground my household fully support this solar energy project & would urge you to approve this application. The proposals for installing photovoltaic panels will ensure future financial and environmental sustainability of Grindleton Pavilion, & is a major investment in our community. The preferred layout in this proposal (WITHOUT the 1m gap) undoubtedly provides the most aesthetically pleasing option.

Planning Application Reference No.: 3/2024/0377

Address of Development: The Pavilion Sawley Rd Grindleton BB7

Comments: I feel that these plans should be passed as this building is used so much and it all helps with running costs the plans submitted are the most economical that can be found and will look very nice, compared to the recommended plan.

Address of Development: Grindleton Pavilion, Sawley Road, Grindleton, Clitheroe, BB7 4QS

Comments: I write with regards to the planning application for the installation of solar panels on the roof of The Pavilion building in Grindleton. I am strongly in favour of this project. Since the inception of the new Pavilion building, future proofing in terms of energy efficiency has taken place such as the installation of the ground source heat pump and the decision to install solar panels continues this.

Given the utility costs the building is currently seeing, the usage of solar panels and battery storage looks to the future. The Grindleton Recreation Ground Charit has thoroughly researched this project and looked to ensure that the installation of the panels is as aesthetically pleasing as possible. I am very happy to support this project and would urge the planning committee to grant approval.

Sawley Road Grindleton Clitheroe

Comments: 1. The reduced scheme:

a). Costs more to install

b) Does not produce as much power and is less efficient

b) The aesthetics of the reduced scheme is less pleasing to the eye

2. In the present environment it will supply electricity to the national grid and reduce the running costs of the Pavilion

3. The Pavilion Committee has strived in the construction of the building from 2012 to ensure it is eco-friendly and energy efficient with insulation and a ground source heat pump

4. We therefore support the full scheme 100%

Good afternoon,

My name is

This email is to show support for the Solar Project as presented. Pavillion we would be most affected if the proposal was unsightly which it isn't. I understand there may be an issue with the panels being "stepped back" from the roof edges. I hope this can be addressed positively as obviously more panel square metres = a significant benefit to the Pavillion. The Pavillion is a wonderful asset to Grindleton and I believe the planners should fully support the Pavillion Team in their drive in developing a sustainable, greener, cost saving energy source. Kind regards

To whom it may concern,

I am writing in support of planning application 3/2024/0377.

Grindleton has experienced high energy costs and solar panels would reduce these costs. The pavilion is an essential part of community life in the area, providing a wide range of accessible, inclusive classes, events and support for the vuneralble. It is essential that this facility is kept open in order to provide for the community.

Yours

Comments: I am writing in support of the application to construct solar panels on the roof of Grindleton Pavilion. I understand that planning permission is required because the proposed solar panels encroach to less than 1 meter from the edge of the roof and the pavilion is classed as a commercial property. My reasons for supporting the application are as follows

- the proposed panels in the application look far better, much neater, less patchy than they would be otherwise and aesthetically give a much improved result, and one more sympathic to the appearance of the building

- the proposed project would actually be cheaper to complete than the alternative design not requiring planning permission, and would also be more efficient and cheaper to run. Cost obviously is a major issue to a community facility such as this. the pavilion is a huge asset to the vilage and anything savings will help to maintain this vital facility.

- despite the 'General Permitted Development' stipulations it is difficult to see any negative impact from the proposed plans .

- although classed as a comercial property, in reality the pavilion is a community asset of great importance to the social welbeing of the village and suggest it not unreasonable this is considered in your assessments

I wish to give support to the applicant and believe that they should be granted planning permission as applied for.

There would seem no common sense reason to refuse it and granting it will not only support the social activities in the village by reducing fuel costs but encourage others to look to alternative non fossil fuels to support and mitigate the global climate crisis. I cannot think, **in the light of the supreme court's decision** concerning the oil well refusal in Sussex, that there is not a parallel issue here in that the RVBC needs to take into account the wider issues contained in this application. I would support an appeal and that could be a waste of everybody's effort.

The future will, I believe, see the widespread adoption of solar and I would like to see the RVBC leading the way in its adoption.
