Steelyte® II

Touchstone Steelyte® II opening casements are uniquely designed and constructed from high-grade 304 stainless steel. Thermally broken and fully weather stripped, they take a full 28mm Argon filled unit. They combine the narrowest of sight lines of 35mm with security, durability, and elegance. The steel is all but immune from corrosion, therefore ideal for coastal properties. Whilst powder coated for the heritage market, openers can be supplied polished for modern building applications we also manufacture matching stainless fixed frames.

Handles

We manufacture our own range of high-grade stainless steel handles and stays. They have a black living finish that naturally patinas or alternatively they can be powder coated to any available RAL colour. All handles fully lockable including a lockable night vent.

All our handles have a choice of handle plates and in addition, can be supplied with decorative back plates made to the customers own design.
