

Ventilation Grill Installation Methodology

Conversion of barn into 3 private properties at **Talbot Street, Chipping**

on behalf of :

Tri Star

April 2025

Contents

- 1. Introduction**
- 2. Installation Methodology**

1. Introduction

1.1 This Installation Statement has been produced to support an application for ventilation grills on a Barn conversion on Talbot Steet, Chipping

1.2 This Statement has been prepared by Zach Thorp of Thorp Design Services.

2. Installation Methodology

2.1 The proposed grill location area is to be measured for correct dimensions on both the external and internal walls.

2.2 The wall will be cut using a 6" diamond cutting stone cutting disk to ensure this is done accurately and neatly.

2.3 The grill will then be installed and held in place with lime-based mortar so that it matches the pointing throughout the remainder of the building. Care will be taken while unpacking to grill to ensure there are no scratches prior to installation.

2.4 The internal fixings will be installed within the joists or rafters and hidden behind the insulation ensuring that the thermal values are retained where applicable.
