CONTENTS

APPENDICES

1. Introduction

1.1 Preamble

1.1.1 Mode Transport Planning ('Mode') has been appointed by Pringle Homes (the 'Applicant') to provide transport planning and highways advice in relation to a planning application for a residential development on Clitheroe Road in Whalley, Lancashire.

1.1.2 The proposed development comprises a total of 77 no. dwellings, with access taken from a new priority junction from Clitheroe Road.

1.1.3 The indicative development site boundary is shown in Figure 1.1.

Figure 1.1 : Indicative Development Site Boundary

1.2 Methodology

1.2.1 This Transport Assessment (TA) has been prepared to assess the development proposals, with consideration to vehicular and pedestrian access, expected trip generation and traffic impact, accessibility by sustainable modes of travel, parking provision and servicing arrangements.

1.2.2 The methodology for the TA adopts the guidance set out within the Ministry of Housing, Communities & Local Government document, 'Transport Evidence Bases in Plan Making and Decision Taking' (2014), which superseded the Department for Transport's (DfT) 'Guidance on Transport Assessment' (2007). Whilst the 2007 guidance has been superseded, it nonetheless remains instructive and has been used to inform the overall structure of the TA.

1.2.3 Highways Pre-Application advice (Pre-App) was sought from Lancashire County Council (LCC) Highways. A meeting was held with LCC Highways on Thursday 23rd January 2025, and a formal response was received following the meeting, dated Monday 27th January 2025. The formal response, as well as all relevant correspondence with LCC Highways, is attached in Appendix A.

1.2.4 A site visit was undertaken on Friday 13th December 2024.

1.2.5 A separate Framework Travel Plan (FTP) has also been produced to accompany the planning application, which sets out a framework to encourage sustainable travel and reduce single-occupancy car trips.

1.3 Report Structure

1.3.1 Following this introductory chapter, the TA has been structured as follows:

- Chapter 2 sets out the relevant national and local transport policy and guidance context;
- Chapter 3 describes the site location, local highway network and collision data;
- Chapter 4 outlines the development proposals, vehicular access, servicing and parking;
- Chapter 5 details accessibility by non-car modes, including public transport, cycling and on foot;
- Chapter 6 details the expected trip generation and trip distribution;
- Chapter 7 provides the results of the traffic impact assessment; and
- Chapter 8 summarises and concludes the findings of the report.

2. Policy Consideration

2.1 Introduction

2.1.1 This chapter of the TA considers key current national and local transport policy as they relate to the development proposals. The following relevant documents have been reviewed:

- National Planning Policy Framework (2024);
- Lancashire County Council Highways and Transport Strategy 2023-2025; and
- A Local Plan for Ribble Valley : Core Strategy 2008 – 2028.

2.1.2 Legislation and policy play an important role in shaping and guiding a new development. As such, the purpose of this chapter is to outline the relevant transport related policies which influence the proposed development from a national and local level.

2.2 National Transport Planning Policy

National Planning Policy Framework

2.2.1 The National Planning Policy Framework (NPPF), updated in December 2024, sets out the Government's planning policies for England and how these are expected to be applied.

2.2.2 Chapter 9 of the NPPF, 'Promoting Sustainable Transport', sets out the important role that transport issues and policies have in facilitating sustainable development. Paragraph 110 states that:

"Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions, and improve air quality and public health. However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be taken into account in both plan-making and decision-making."

2.2.3 Specifically, Paragraph 115 states that when assessing applications for development, *"it should be ensured that*:

- *Sustainable transport modes are prioritised taking account the vision for the site, given the type of development and its location;*
- *safe and suitable access to the site can be achieved for all users;*
- *the design of streets, parking areas, other transport elements and the content of associated standards reflects current national guidance, including the National Design Code and the National Model Design Code; and*

- *any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree through a vision led approach."*

2.2.4 In terms of highways impact and safety, Paragraph 116 states that:

"Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impacts on the road network, following mitigation, would be severe, taking into account all reasonable future scenarios."

2.2.5 Within this context, Paragraph 117 goes on to state that *"applications for development should:*

- *give priority first to pedestrian and cycle movements, both within the scheme and with neighbouring areas; and second – so far as possible – to facilitating access to high quality public transport, with layouts that maximise the catchment area for bus or other public transport services, and appropriate facilities that encourage public transport use;*
- *address the needs of people with disabilities and reduced mobility in relation to all modes of transport;*
- *create places that are safe, secure and attractive – which minimise the scope for conflicts between pedestrians, cyclist and vehicles, avoid unnecessary street clutter, and respond to local character and design standards.*
- *allow for the efficient delivery of goods, and access by service and emergency vehicles; and*
- *be designed to enable charging of plug-in and other ultra-low emission vehicles in safe, accessible and convenient locations."*

2.3 Regional Planning Policy

Lancashire County Council Highways and Transport Strategy 2023-2025

2.3.1 LCC's Highways and Transport Strategy provides a high-level view of how they will deliver their highways- and transport-related responsibilities between 2023 and 2025, governed by four main priorities:

1. Highways asset management
2. Network management and safety
3. Public transport and active travel
4. Strategic partnerships

2.3.2 In relation to network management and safety, LCC will aim to provide a network that *'transport network will provide for the safe and efficient movement of its users by a choice of ways to travel. Particular problems of traffic congestion and road capacity that have previously limited economic growth in key areas are being resolved or mitigated'.* LCC therefore pledge to:

- *'Manage our network effectively';*
- *'Continue towards our overriding aim that people are safe and feel safe on our roads';*
- *'Transform our streets and places to create safe and social spaces'*
- *'Deliver local safety improvements and employ route-based interventions to improve the safety of 'high risk' parts of our road network, using preventative measures to manage speeds and improve driver behaviour';*
- *'Work with local planning authorities and developers to ensure that new developments can be accessed safely with adequate provision to safeguard vulnerable users, pedestrians and cyclists*'; and
- *'Work with parish and town councils to deliver local safety improvements and encourage safe and responsible behaviour by road users.'*

2.3.3 Regarding public transport and active travel, LCC will:

- *'Deliver bus priority and other service improvements to make public transport the preferred choice of travel in Lancashire';*
- *'Improve the rail travel offer across Lancashire through the improvement of services and network infrastructure*'; and
- *Put walking and cycling at the forefront of our local transport planning and bus travel for longer local journeys'.*

2.4 Local Planning Policy

A Local Plan for Ribble Valley: Core Strategy 2008 – 2028.

2.4.1 The Core Strategy is the central document to the Local Development Framework (LDF) which establishes the vision, underlying objectives and key principles that will guide development across Ribble Valley up to 2028.

2.4.2 Chapter 10 of the Core Strategy relates to Development Management Polices, which aid decision making in relation to planning applications.

2.4.3 Sustainable development underpins Policy DMG3 of the Core Strategy, 'Transport and Mobility'. Policy DMG3 states that the Local Planning Authority will consider:

- *'The availability and adequacy of public transport and associated infrastructure to serve those moving to and from the development*
- *The relationship of the site to the primary route network and the strategic road network*
- *The provision made for access to the development by pedestrian, cyclists and those with reduced mobility*
- *Proposals which promote development within existing developed areas or extensions to them at locations which are highly accessible by means other than the private car*

- *Proposals which locate major generators of travel demand in existing centres which are highly accessible by means other than the private car.*
- *Proposals which strengthen existing town and village centres which offer a range of everyday community shopping and employment opportunities by protecting and enhancing their vitality and viability*
- *Proposals which locate development in areas which maintain and improve choice for people to walk, cycle or catch public transport rather than drive between homes and facilities which they need to visit regularly*
- *Proposals which limit parking provision for developments and other on or off street parking provision to discourage reliance on the car for work and other journeys where there are effective alternatives.*

2.4.4 All major proposals should *'offer opportunities for increased use of, or the improved provision of, bus and rail facilities'* and *'will be required to provide adequate car parking and servicing space in line with currently approved standards'.*

2.5 Summary

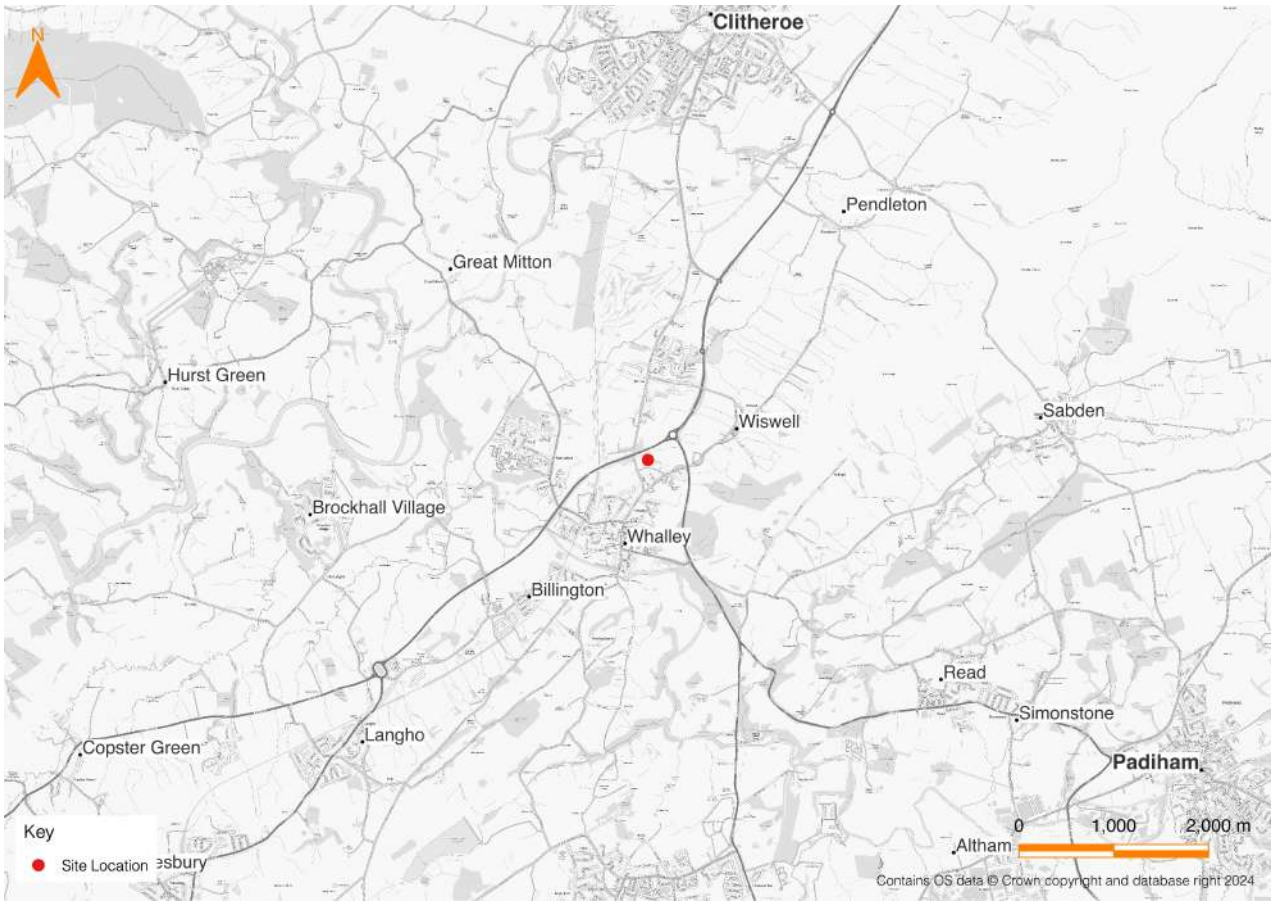
2.5.1 In accordance with the national and local policy, this planning application is supported by a TA which details the site's accessibility by sustainable modes of travel (Chapter 5) and assesses the impact of the proposed development of the local highway network (Chapter 7).

3. Existing Conditions

3.1 Site Location

3.1.1 The development site is located in Whalley, c.800m north of Whalley Village centre, c.900m west of Wiswell and c.4.7km south of Clitheroe, as shown in Figure 3.1.

Figure 3.1 : Strategic Site Location



3.2 Existing Development Site

3.2.1 The development site currently comprises undeveloped land and vegetation to the east of Clitheroe Road that abuts the banking along the elevated section of the A59 to the north.

3.2.2 The existing development site is shown in Photograph 3.1 and Photograph 3.2.

Photograph 3.1 : Existing Development Site

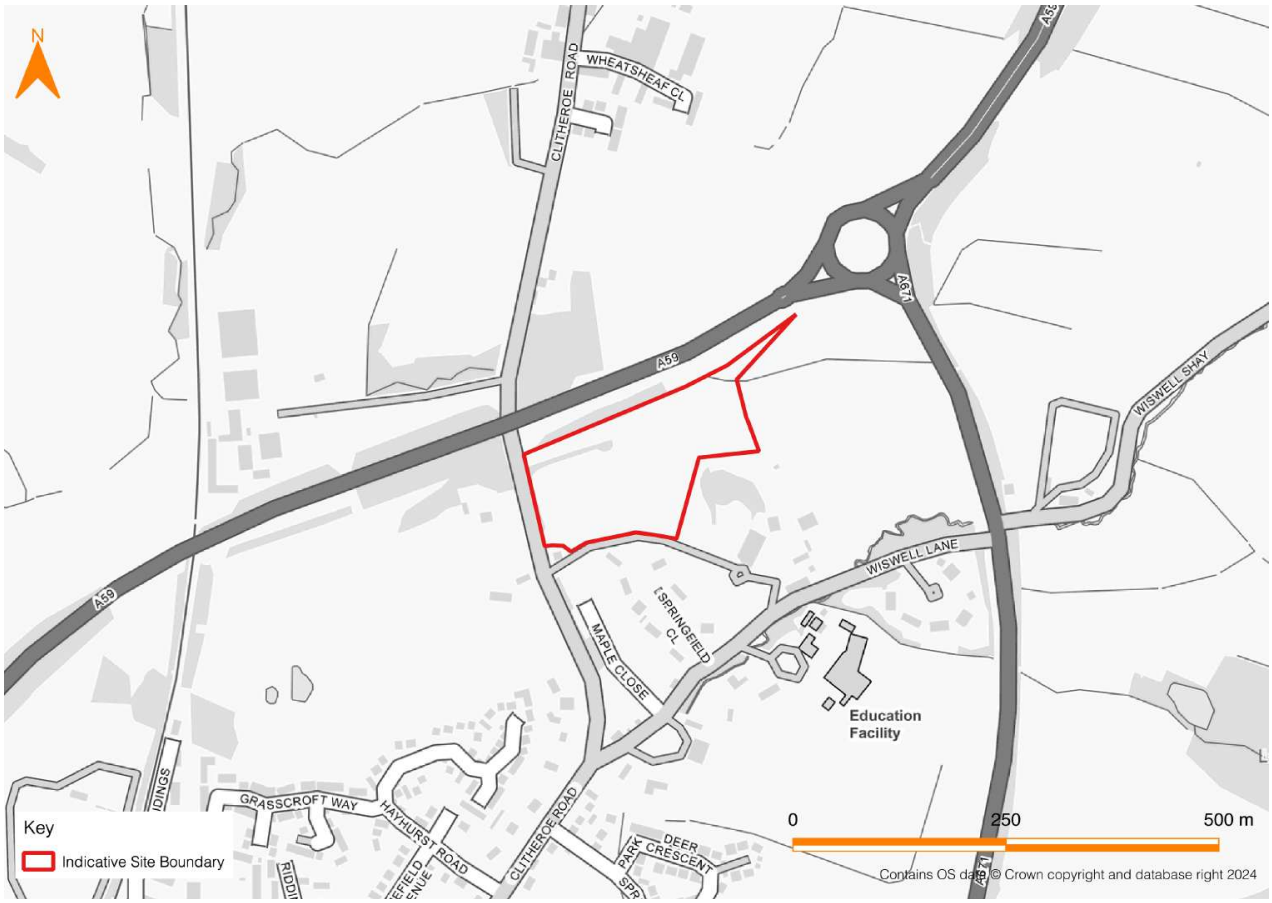
Photograph 3.2 : Existing Development Site

3.3 Local Highway Network

3.3.1 The development site is bound to the west by Clitheroe Road and to the north and east by existing vegetation and trees, as well as the banking along the elevated section of the A59. To the south, the development site abuts an existing access road which serves existing residential properties to the south and east.

3.3.2 Figure 3.2 shows the location of the site in the context of the local highway network.

Figure 3.2 : Local Highway Network



Clitheroe Road

3.3.3 Access to the site will be taken from Clitheroe Road, which runs in a broadly north-south alignment to the west of the site.

3.3.4 Clitheroe Road provides access to the village of Barrow to the north, and into the centre of Whalley to the south.

3.3.5 The existing conditions along Clitheroe Road are summarised in Table 3.1 and shown in Photograph 3.3 to Photograph 3.5.

Table 3.1 : Clitheroe Road – Existing Conditions

Road Classification	Unclassified	Footway Width	c.2.0-2.6m
Road Type	Two-way single carriageway	Pedestrian Facilities	Footway available to west of carriageway
Speed Limit	30mph / 40mph	Cycle Facilities	No
Carriageway Width	c.8.0m	Public Transport Provision	Yes
Adoption Status	Adopted	Streetlighting	Yes

3.3.6 As shown in Photograph 3.3 and Photograph 3.4, a speed limit change is in place adjacent to the development site. This is indicatively shown in Figure 3.3, which shows the existing 40mph speed limit to the north, which continues to Barrow, and the existing 30mph speed limit to the south, towards Whalley.

3.3.7 Currently, the 40mph speed limit is located adjacent to the proposed site access location.

Photograph 3.3 : Clitheroe Road – northbound

Photograph 3.4 : Clitheroe Road – southbound

Figure 3.3 : Clitheroe Road – Indicative Location of Existing Speed Limit Change

Photograph 3.5 : Clitheroe Road – Bus Stop

3.3.8 An Automatic Traffic Counter (ATC) was placed on Clitheroe Road adjacent to the proposed site access location from Friday 13th – Thursday 19th December 2024 by an independent survey company to ascertain the existing speeds on the road.

3.3.9 A summary of the ATC results is presented in Table 3.2.

Table 3.2 : Clitheroe Road - ATC Results

Direction	Average One-Way Flow (per day)	Average Speed	85th Percentile Speed
Northbound	3,629	36.0mph	41.0mph
Southbound	3,473	34.7mph	39.9mph

3.3.10 Table 3.2 shows that the recorded 85th percentile speeds, both northbound and southbound, comply closely with the existing posted speed limit of 40mph adjacent to the proposed development site.

3.4 Road Safety

3.4.1 Personal Injury Collision (PIC) data in vicinity of the development site has been obtained from the CrashMap database (crashmap.co.uk) for the most recently available five-year period between 2019 and 2023.

3.4.2 Figure 3.4 shows the extent of the study area on the local highway network, which covers Clitheroe Road within the vicinity of the site.

Figure 3.4 : Personal Injury Collisions Map (source : CrashMap)

3.4.3 As shown in Figure 3.4, no PICs were recorded in the study area between 2019 and 2023.

3.4.4 Therefore, there is no evidence to suggest that the highway layout, design or condition are significant factors in PIC records on the local highway network.

3.5 Public Rights of Way

3.5.1 There are no Public Rights of Way (PRoWs) within or along the site boundary.

3.5.2 There is however a network of PRoW available within the vicinity of the site, which could be used by future residents, as shown in Figure 3.5.

Figure 3.5 : Public Right of Way Map (source : LCC)

3.6 Air Quality

3.6.1 According to the Department for Environment, Food and Rural Affairs (DEFRA), the site is not located within an Air Quality Management Area (AQMA).

4. Development Proposals

4.1 Proposed Use

4.1.1 The proposed development comprises a total of 77 no. dwellings, with associated car parking provision and landscaping.

4.1.2 The proposed site layout is shown in Figure 4.1 and attached in Appendix B.

Figure 4.1 : Proposed Site Layout (source : MCK Associates)

4.2 Proposed Site Access Arrangement

4.2.1 Access to the site will be via a new priority junction on Clitheroe Road, which will feature a ghost right-turn lane. The access road will provide a 5.5m wide carriageway and 6m corner radii.

4.2.2 The access will include a 3m wide shared footway / cycleway on each side, reducing to 2m footways within the site. Internally, cyclists will then use the carriageway.

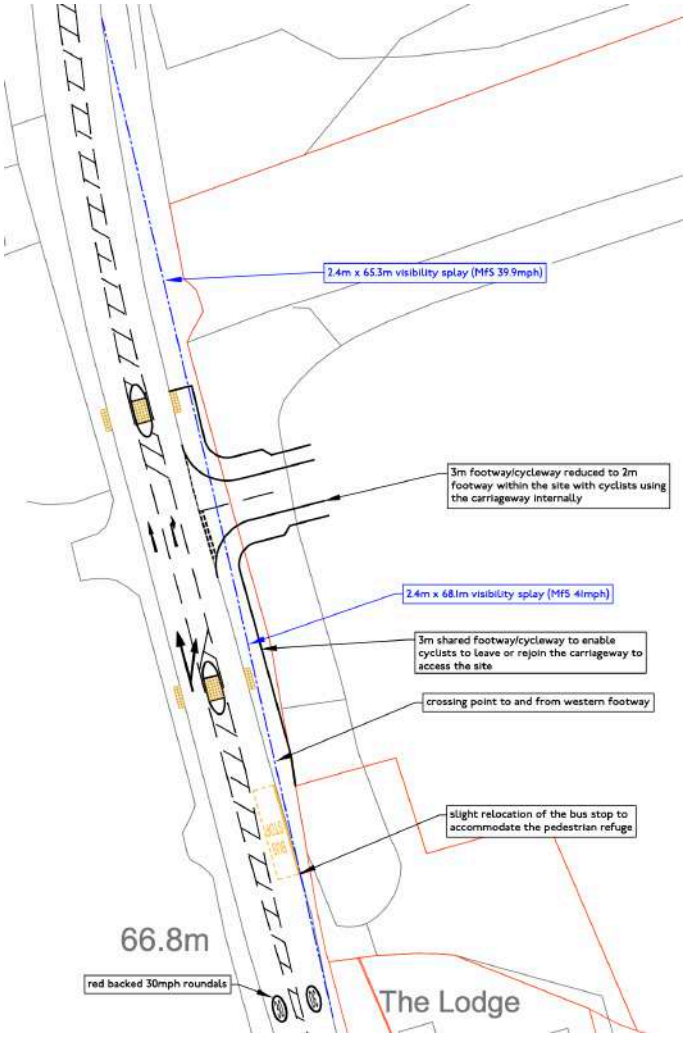
4.2.3 Adjacent to the site, Clitheroe Road is currently subject to a 40mph speed limit as described previously. As part of the proposals, Clitheroe Road would be reduced to a 30mph speed limit across the site frontage, as requested by LCC Highways during Pre-App discussions. This will create a continuous stretch of a 30mph speed limit between Barrow to the north and Whalley to the south.

4.2.4 To enforce the 30mph speed limit, traffic calming measures are proposed along Clitheroe Road, which are outlined in Section 4.3. The provision of a ghost right-turn lane at the proposed site access will form part of the traffic calming measures.

4.2.5 In line with Manual for Streets (MfS) guidance for 30mph roads, 2.4m x 43m visibility splays are achievable in both directions along Clitheroe Road. These visibility splays are deemed appropriate based on the proposals to reduce the speed limit to 30mph adjacent to the site, along with the traffic calming measures.

4.2.6 The proposed access arrangement, with achievable visibility splays along Clitheroe Road, are shown in Figure 4.2, and the full drawing (**Drawing J32-8482-PS-001**) attached in Appendix C.

Figure 4.2 : Proposed Site Access Arrangement

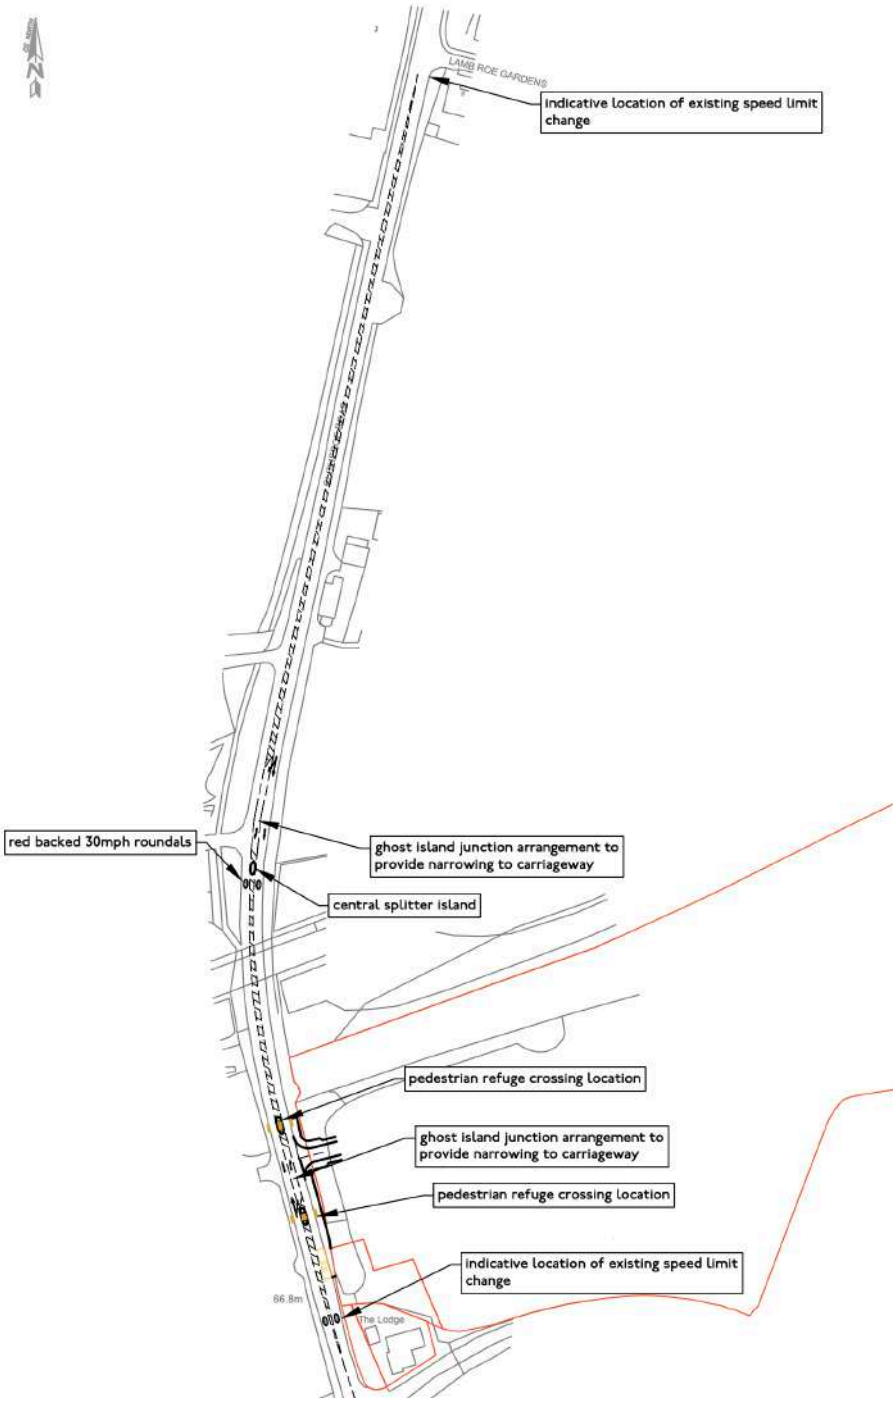


4.3 Clitheroe Road Traffic Calming Scheme

4.3.1 To enforce the proposed 30mph speed limit across the site's frontage and towards Barrow, traffic calming measures are proposed along Clitheroe Road in the vicinity of the site. These have been agreed in principle with LCC Highways during Pre-App discussions.

4.3.2 The proposed traffic calming measures along Clitheroe Road, are shown in Figure 4.3, with the full drawing (**Drawing J32-8482-PS-001**) attached in Appendix C.

Figure 4.3 : Proposed Clitheroe Road Traffic Calming Scheme



4.3.3 As shown in Figure 4.3, the traffic calming scheme includes:

- Provision of ghost island right-turn arrangements at the proposed site access arrangement, as well as at the Clitheroe Road / The Palm Tree Company Warehouse access junction to narrow the carriageway; and
- Several pedestrian crossing points, including adjacent to the site access and adjacent bus tops, as well as along Clitheroe Road. these will act as a traffic calming measure, whilst also improving pedestrian accessibility.

4.4 Bus Stop Relocation and Improvements

4.4.1 To accommodate the proposed pedestrian refuse island to the south of site access, it is proposed relocate the southbound bus stop on Clitheroe Road, as shown in Figure 4.2.

4.4.2 At the request of LCC Highways, it is also proposed to upgrade both the northbound and southbound bus stops to include bus shelters as part of the development proposals.

4.5 Servicing and Delivery Arrangements

4.5.1 Swept path analysis for a refuse collection vehicle, the largest vehicle expected to enter the site, has been undertaken at the site access and within the internal road network. This is shown in Figure 4.4 and Figure 4.5, with the full drawings (**Drawing J32-8482-PS-002/3**) attached in Appendix D.

Figure 4.4 : Swept Path Analysis – Site Access (11.2m Refuse Vehicle)

Figure 4.5 : Swept Path Analysis – Internal Layout (11.2m Refuse Vehicle)

4.5.2 As demonstrated in Figure 4.3, a refuse collection vehicle can safely enter the site, manoeuvre within the internal layout and exit in a forward gear.

4.5.3 Refuse collection vehicles can also get within an appropriate distance of each dwelling in line with bin collection distance guidance (MfS and BS:5906). The site's Waste Management Plan is attached in Appendix E.

4.6 Parking Provision

4.6.1 LCC's adopted parking standards are summarised in Appendix 2 of the *'Joint Lancashire Structure Plan',* adopted in March 2005.

4.6.2 LCC's residential (Use Class C3) parking standards are summarised in Table 4.1.

Table 4.1 : LCC Adopted Car Parking Standards (source : LCC)

Dwelling Type	Maximum Car Parking
1-bed	1 space per dwelling
2/3-bed	2 spaces per dwelling
4+ bed	3 spaces per dwelling

4.6.3 Parking will be provided in line with LCC's adopted parking standards.

5. Sustainable Accessibility and Active Travel

5.1 Introduction

5.1.1 Current Government policy and guidance places significant emphasis on the promotion of sustainable transport modes for all new developments. This forms part of a long-term strategy to reduce the reliance on private car trips.

5.1.2 The National Planning Policy Framework (NPPF), updated in December 2024, sets out the Government's planning policies for England and how these are expected to be applied. Chapter 9 of the NPPF, '*Promoting Sustainable Transport*', sets out the important role that transport issues and policies have in facilitating sustainable development.

5.1.3 Paragraph 110 states that: *"Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes. This can help to reduce congestion and emissions and improve air quality and public health. However, opportunities to maximise sustainable transport solutions will vary between urban and rural areas, and this should be considered in both plan-making and decision-making."*

5.1.4 This chapter considers accessibility via sustainable modes of transport to the proposed development site, including access by public transport, cycle and on foot.

5.2 Pedestrian Accessibility

5.2.1 Guideline walking distances provided in the Chartered Institution of Highways and Transportation (CIHT) document *'Guidelines for Providing for Journeys on Foot (2000)'*, are shown in Table 5.1.

Table 5.1 : CIHT Acceptable Walking Distances

Criteria	Town Centre	Commuting	Elsewhere
Desirable	200m	500m	400m
Acceptable	400m	1,000m	800m
Preferred Maximum	800m	2,000m	1,200m

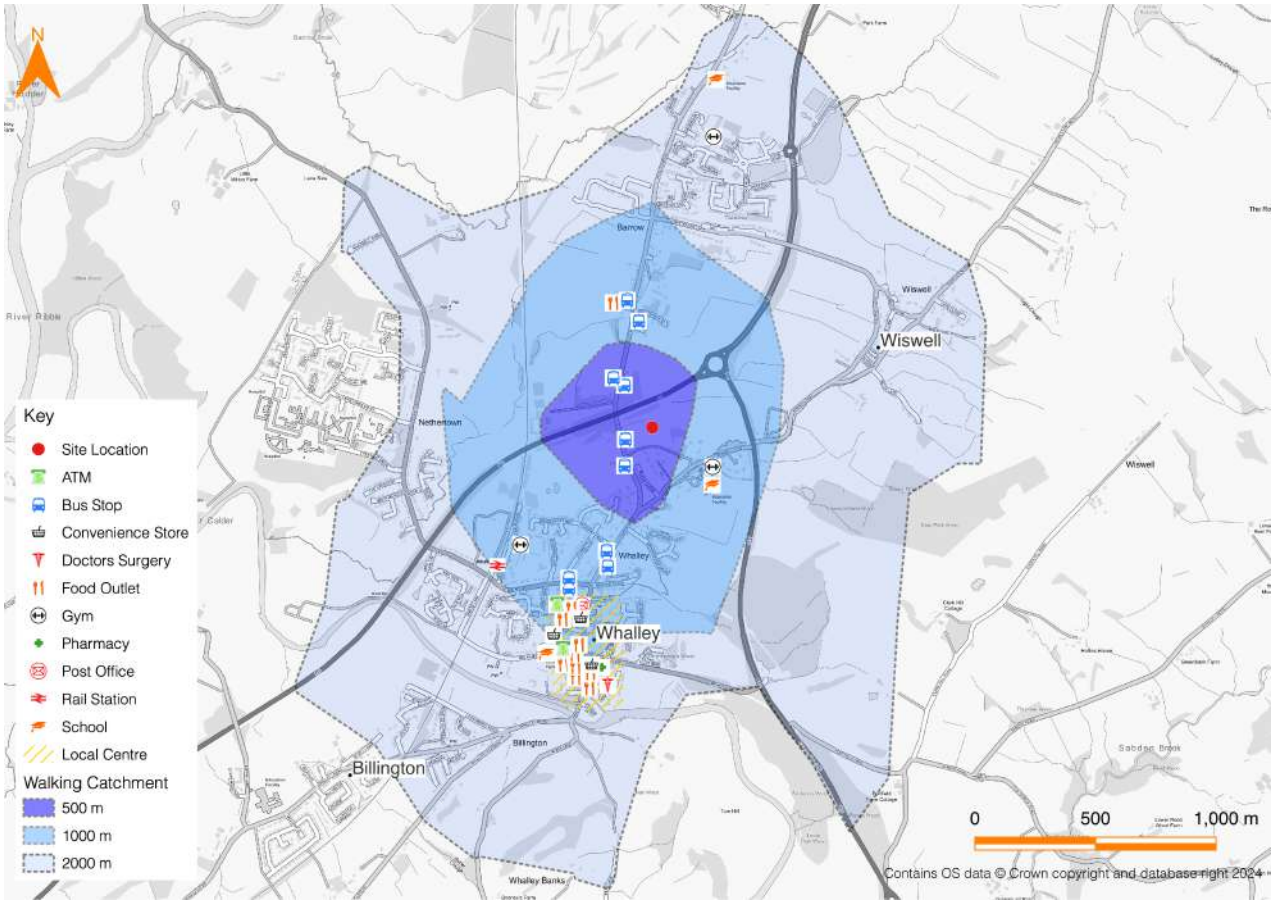
5.2.2 The CIHT guidelines shown in Table 5.1 suggest that for commuting purposes up to 500m is a desirable walking distance, up to 1,000m is considered an acceptable walking distance and 2,000m is the preferred maximum walking distance.

5.2.3 Appropriate walking distances are dependent upon the location of the specific development; more remote locations will see people being prepared to walk further to their end destination. Similarly, appropriate walking distances are also dependent upon the standard of existing pedestrian infrastructure provision, with further walking distances achievable in locations with extensive and high-quality pedestrian footways, crossings and pedestrianised areas.

5.2.4 As described previously, a network of existing footways is in place on the local highway network providing dedicated pedestrian access to nearby amenities, leisure facilities, communities, and employment areas.

5.2.5 Figure 5.1 presents the local amenities and 500m, 1,000m and 2,000m walking catchments from the site, as specified in CIHT guidance for commuting purposes.

Figure 5.1 : Walking Catchment Area with Local Amenities



5.2.6 Table 5.2 provides an indication of the distances and approximate walking times to local bus stops and local amenities. The distances have been measured from the centre of the site and the times are based on an average walking speed of 1.4 metres per second and do not allow for waiting time to cross junctions.

Table 5.2 : Local Amenities – Distances and Walking Times

Amenity	Distance	Average Walking Time
Southbound Bus Stop on Clitheroe Road	100m	1 minute
Northbound Bus Stop on Clitheroe Road	180m	2 minutes
Oakhill School & Nursery	700m	8 minutes
Oakhill Leisure Centre	700m	8 minutes
The Eagle at Barrow Restaurant	700m	8 minutes
Whalley Village Centre	950m	11 minutes
Whalley Rail Station	1.2km	14 minutes

5.2.7 As shown in Figure 5.1, the closest bus stops to the site are located adjacent to the site on Clitheroe Road within c.180m (2-minute walk).

5.2.8 Within a 1,000m walking catchment, a range of amenities are available, particularly to the south of the site in the centre of Whalley, which is accessible within c.950m (11-minute walk). This includes various food outlets, convenience stores, the Whalley Medical Group and the Whalley Pharmacy.

5.2.9 Whalley Railway Station is also accessible within c.1.2km (14-minute walk) to the west of Whalley village centre.

5.2.10 Additional amenities are also available outside of the centre of Whalley, including the Oakhill School & Nursery and Oakhill Leisure Centre within c.700m (8-minute walk) to the southeast of the site, as well as The Eagle at Barrow Restaurant also accessible within c.700m (8-minute walk) along Clitheroe Road to the north.

5.2.11 As described previously, the local highway network benefits from an extensive network of footways, including dropped kerbs and tactile paving at pedestrian crossings, and the site is well situated in terms of accessibility to local bus services and local amenities. It has therefore been demonstrated that the site is well-placed in terms of pedestrian connectivity, with walking representing a realistic alternative to car trips.

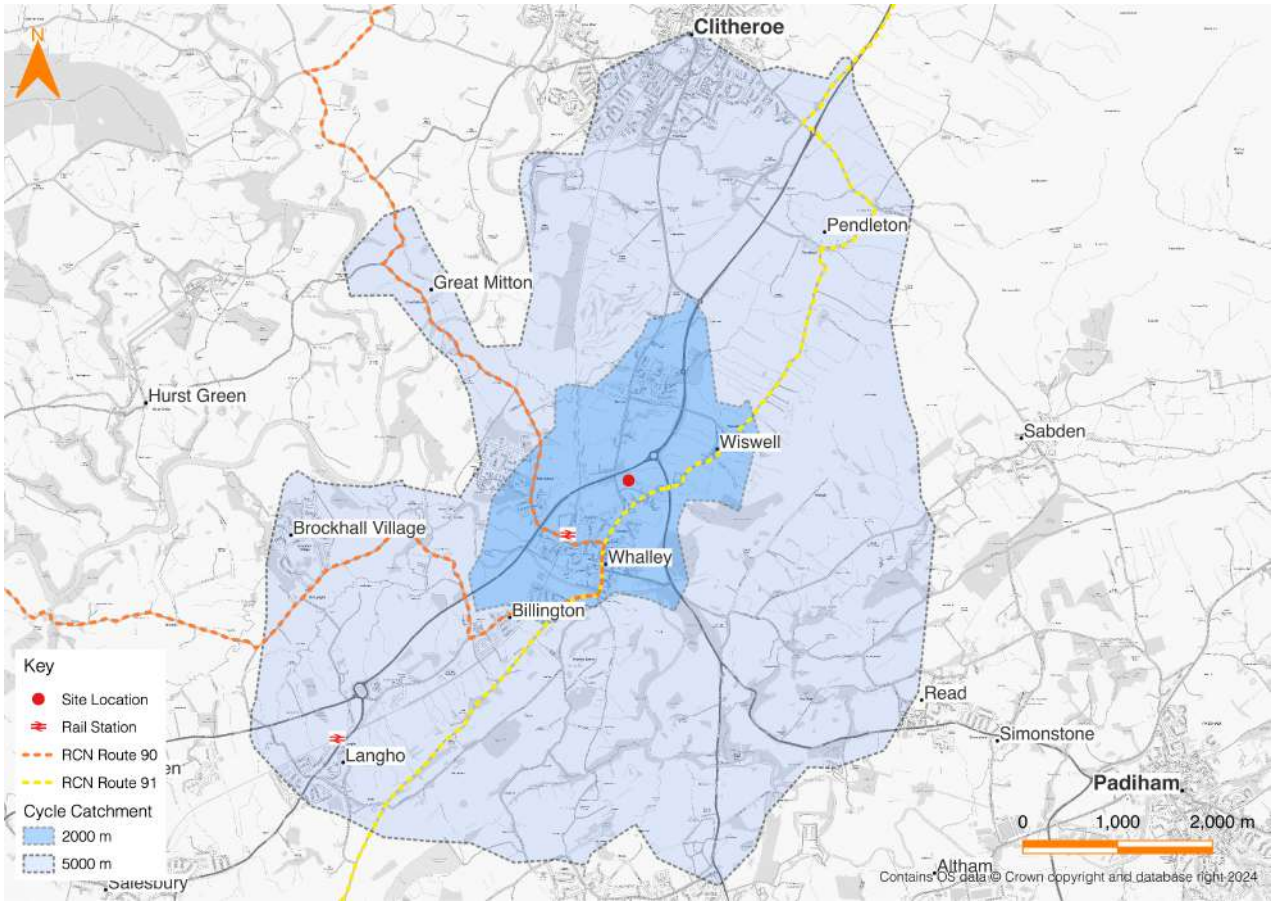
5.3 Cycle Accessibility

5.3.1 As with pedestrian accessibility, the level of a site's cycle accessibility depends upon a combination of the distance from local amenities and the standard of existing cycle infrastructure. It should, however, be noted that that cycle infrastructure can include facilities shared with vehicles and pedestrians as well as dedicated cycle infrastructure.

5.3.2 In respect of acceptable cycle distances, 'Local Transport Note 1/20: Cycle Infrastructure Design', published by the Department for Transport (DfT), states that 'two out of every three personal trips are less than five miles in length - which is an achievable distance to cycle for most people'.

5.3.3 Figure 5.2 indicates the cycling catchment area around the proposed development site for 2km and 5km.

Figure 5.2 : Cycle Catchment Plan



5.3.4 As shown in Figure 5.2, Whalley and Wiswell are available within a 2km cycle catchment, as well as Whalley Rail Station. A number of suburban areas, including Pendleton and Langho, as well as the south of Clitheroe, are located within a 5km cycle catchment of the site.

5.3.5 Regional Cycle Network (RCN) Routes 90 and 91 are also accessible within both the 2km and 5km cycle catchments; these both form part of the Lancashire Cycleway network. Both RCN routes run through the centre of Whalley along King Street, which is accessible via Clitheroe Road from the site.

5.3.6 Considering the close proximity of local cycle routes and accessibility to local areas, cycling could be a reasonable method of travel for residents, particularly as an alternative to private car trips.

5.4 Public Transport Services

Local Bus Services

5.4.1 The closest bus stops to the site on located on Clitheroe Road adjacent to the site and are accessible within c.180m (2-minute walk).

5.4.2 It is also proposed to upgrade both the northbound and southbound bus stops to include bus shelters as part of the development proposals.

5.4.3 Table 5.3 provides a summary of routes and times of local public bus services accessible from these stops on Clitheroe Road.

Table 5.3 : Local Bus Services – Clitheroe Road

Service No.	Route	Approx. Two-Way Frequency (buses / hour)				
		AM	Off-Peak	PM	Sat	Sun
22 Valleyline	Clitheroe – Blackburn - Shadsworth	2	2	2	2	1
280	Preston – Clitheroe - Skipton	1	1	1	1	<1
637*	Billington St Augustine's Roman Catholic High School Service	<1	No Service	<1	No Service	No Service
859*	Clitheroe Royal Grammar School Service	<1	No Service	<1	No Service	No Service
995*	Myerscough College Service	<1	No Service	<1	No Service	No Service
M2 Mainline	Burnley – Padiham - Clitheroe	2	2	2	2	1
						Dedicated school / college service

5.4.4 As shown in Table 5.3, 3no. regular public services are available from Clitheroe Road. The 22 Valleyline and M2 Mainline services operate with a frequency of up to every 30 minutes on weekdays and Saturdays, which provide access to Clitheroe, Blackburn and Burnley. The no.280 service also operates hourly on these days, providing a bus service between Preston and Skipton.

5.4.5 Additional school / college only services are also available during peak hours on weekdays, serving Billington St Augustine's Roman Catholic High School, Clitheroe Royal Grammar School and Myerscough College.

5.4.6 The frequency and proximity of local bus services presents them as a convenient and realistic method of travel for future residents for leisure, commuting or accessing local amenities.

Rail Services

5.4.7 The closest rail station to the site is Whalley Station within c.1.2km (14-minute walk) to the southwest of the site, to the west of Whalley Village Centre. It is therefore accessible within both the walking and cycling catchments.

5.4.8 A summary of the direct rail services from Whalley Station are summarised in Table 5.4.

Table 5.4 : Direct Rail Services – Whalley Station

Destination	Approx. Frequency	Approx. Journey Time
Rochdale *via Blackburn, Bolton and Manchester Victoria*	1 service / hour	1 hour 35 minutes
Clitheroe	1 service / hour	8 minutes

5.4.9 As shown in Table 5.4, there are 2no. frequent rail services available from Whalley Station providing direct rail access to destinations including Manchester, Blackburn, Bolton, Clitheroe and Rochdale. These services also provide access to local stations along each respective route.

5.4.10 This demonstrates the site's accessibility by rail, particularly as an alternative to private car trips for commuting or as part of a multi-modal journey.

5.5 Summary

5.5.1 In summary, it has been shown that the site can be accessed via sustainable modes of travel, including walking, cycling and public transport – thereby offering an alternative to single occupancy car trips. This includes the following:

- Existing footways are available on the local highway network providing safe walking routes to local amenities and public transport provision;
- Bus stops are located within a short walking distance from the site and are accessible via dedicated pedestrian routes;
- Access to a network of regional cycle routes within the local area;
- Regular bus services from Clitheroe Road provide access to areas such as Clitheroe, Blackburn, Preston, Skipton and Burnley;
- Dedicated school / college only services provide access to several local schools / colleges during peak hours; and
- Whalley Railway Station provides frequent and direct rail services to a wide range of destinations including Manchester, Bolton and Clitheroe. These services also provide access to local stations along their routes.

5.5.2 Overall, alternatives to single-occupancy car trips are available within the local area of the site, including walking routes, cycling routes and public transport services.

5.5.3 The site is therefore compliant with the NPPF in paragraph 115 which states that: *'in assessing sites that may be allocated for development in plans, or specific application for development, it should be ensured that: a) sustainable transport modes are prioritised taking account the vision for the site, given the type of development and its location'.*

5.5.4 Furthermore, the proposals accords with paragraph 117 of the NPPF which states that: *'applications for development should: a) give priority first to pedestrian and cycle movements, both within the scheme and with neighbouring areas; and second - so far as possible - to facilitating access to high quality public transport, with layouts that maximise the catchment area for bus or other public transport services, and appropriate facilities that encourage public transport use'.*

6. Trip Generation and Trip Distribution

6.1 TRICS Trip Rates

6.1.1 To quantify the traffic impact of the development on the local highway network, a trip generation exercise has been undertaken for the proposed residential development. Vehicles trip rates have been derived from the TRICS database (v7.11.4) using the '*Residential – Houses Privately Owned*' land use category.

6.1.2 The TRICS trip rates were approved by LCC Highways during Pre-App discussions. The full TRICS outputs are attached in Appendix F.

6.1.3 TRICS surveys during the COVID-19 lockdowns were removed as it is likely that travel behaviours were affected during this time.

6.1.4 In line with the *'TRICS Good Practice Guide 2021'*, no surveys were excluded on the basis of geographical region. The study undertaken by TRICS revealed that there is a significantly higher correlation between location type and resulting trip rates than there is between region and resulting trip rates.

6.1.5 The guidance recommends that regional selection should not be a major consideration when applying trip rate calculation filtering criteria. The guidance also indicates that location type is one of the most influential factors in terms of trip generation. Therefore, the 'Suburban Area' and 'Edge of Town' location types have been selected.

6.2 Trip Generation

6.2.1 The TRICS trip rates and estimated trip generation during the weekday AM and PM peak hour are shown in Table 6.1.

Table 6.1 : TRICS Trip Generation (per dwelling) - Vehicles

TRICS Land Use Category	AM Peak Hour (08:00-09:00)			PM Peak Hour (17:00-18:00)		
	Arrive	Depart	Total	Arrive	Depart	Total
Trip Rate *'Residential – Houses Privately Owned'*	0.174	0.403	**0.577**	0.357	0.177	**0.534**
Proposed Development (77no. dwellings)	13	31	**44**	27	14	**41**

6.2.2 As shown in Figure 6.1, the proposed development is expected to generate **44** two-way trips during the AM peak hour and **41** two-way trips during the PM peak hour.

6.3 Trip Distribution

6.3.1 A trip distribution exercise has been undertaken based on 2011 Census Data (Location of usual residence and place of work) for 'Car Drivers' residing in Middle Layer Super Output Area (MSOA) 'Ribble Valley 007'.

6.3.2 The data has been used to inform the pattern of arrivals and departures to / from the site to / from the top 30 MSOAs and Local Authority Districts (LAD's) across the northwest of England. Please note that any trips to MSOA's included within the top 30 were subtracted from their corresponding LAD to avoid any double counting.

6.3.3 A summary of the trip distribution is shown in Table 6.2, with full calculations attached in Appendix G.

Table 6.2 : 2011 Census – Trip Distribution

MSOA / LAD	Total	Percentage
E02005276 : Ribble Valley 007	347	13.0%
E02005271 : Ribble Valley 002	173	6.5%
E02002620 : Blackburn with Darwen 006	160	6.0%
E02002625 : Blackburn with Darwen 011	125	4.7%
E02005272 : Ribble Valley 003	101	3.8%
E02005277 : Ribble Valley 008	93	3.5%
E02005274 : Ribble Valley 005	83	3.1%
E02005213 : Hyndburn 002	78	2.9%
E02005178 : Burnley 003	75	2.8%
E02002615 : Blackburn with Darwen 001	62	2.3%
E02005270 : Ribble Valley 001	62	2.3%
E02005212 : Hyndburn 001	55	2.1%
E02005219 : Hyndburn 008	51	1.9%
E02005269 : Preston 017	48	1.8%
E02002622 : Blackburn with Darwen 008	41	1.5%
E02005215 : Hyndburn 004	34	1.3%
E02002617 : Blackburn with Darwen 003	29	1.1%
E02005252 : Pendle 013	28	1.1%
E02005186 : Burnley 011	27	1.0%
E02005214 : Hyndburn 003	26	1.0%
E02002624 : Blackburn with Darwen 010	24	0.9%

MSOA / LAD	Total	Percentage
E02005217 : Hyndburn 006	24	0.9%
E02005256 : Preston 004	24	0.9%
E02005177 : Burnley 002	22	0.8%
E02002630 : Blackburn with Darwen 016	20	0.8%
E02002619 : Blackburn with Darwen 005	19	0.7%
E02005209 : Fylde 007	19	0.7%
E02005275 : Ribble Valley 006	18	0.7%
E02005218 : Hyndburn 007	17	0.6%
E02005179 : Burnley 004	16	0.6%
Preston	83	3.1%
Blackburn with Darwen	79	3.0%
South Ribble	69	2.6%
Pendle	61	2.3%
Manchester	39	1.5%
Rossendale	38	1.4%
Blackpool	35	1.3%
Burnley	35	1.3%
Chorley	34	1.3%
Bolton	32	1.2%
Bury	29	1.1%
Wyre	23	0.9%
Lancaster	22	0.8%
Salford	19	0.7%
Trafford	19	0.7%
Rochdale	16	0.6%
Fylde	15	0.6%
Hyndburn	15	0.6%
Warrington	14	0.5%
Oldham	13	0.5%
Stockport	10	0.4%
Wigan	9	0.3%
Ribble Valley	9	0.3%
Cheshire East	8	0.3%

MSOA / LAD	Total	Percentage
West Lancashire	8	0.3%
South Lakeland	7	0.3%
Tameside	5	0.2%
Liverpool	5	0.2%
Cheshire West and Chester	4	0.2%
Knowsley	2	0.1%
Halton	2	0.1%
Sefton	1	0.0%
Barrow-in-Furness	1	0.0%
Copeland	1	0.0%
Eden	1	0.0%
Total	2,664	100%

6.3.4 The percentages shown in Table 6.2 were assigned to routes across the local highway network based on expected journey times to the above locations. The journey time assessment was undertaken using Google Maps for each peak hour.

6.3.5 It should be noted that as part of the Lawsonsteads Development (App Ref : 3/2013/0137), a new signalised junction has been provided from Springwood Rive onto the A671, to reduce vehicle trips through Whalley and along Wiswell Lane. As the development is not yet operational, this trip distribution exercise has not taken into account the future operation of this junction. Therefore, this will support the robust junction capacity assessments outlined in Chapter 7.

6.3.6 As shown in Table 6.2, 13% of trips are distributed internally within the 'Ribble Valley 007' MSOA. For route assignment purposes, it was assumed that these trips were distributed to / from Billington due to its central location within the MSOA.

6.3.7 It should also be noted that where a genuine route choice exists with a minimal difference in expected journey time, traffic was assigned evenly to each route.

6.3.8 The full calculations for the distribution of trips to each origin / destination the attached in Appendix G.

6.3.9 The network diagrams attached in Appendix H also present the development trip distribution and route assignment across the study area.

7. Traffic Impact Assessment

7.1 Introduction

7.1.1 On the basis that the proposed development will result in an increase of 30 or more two-way vehicle movements during the AM or PM peak period, and at the request of LCC Highways, junction capacity analysis has been undertaken at the following off-site junctions:

- A671 / Whalley Road signalised junction
- King Street / Accrington Road mini-roundabout
- Clitheroe Road / King Street / Station Road / Brooke's Lane mini-roundabout

7.1.2 The proposed site access junction has also been assessed.

7.2 Assessment Traffic Flows

7.2.1 Manual classified count (MCC) and queue length surveys were undertaken at the junctions listed above on Wednesday 5th February 2025. All raw survey data is attached in Appendix I.

7.2.2 As stated previously, an ATC was placed on Clitheroe Road adjacent to the proposed site access location from Friday 13th to Thursday 19th December 2024. This raw survey data is also attached in Appendix I.

7.2.3 The 2025 base traffic flow data in the AM and PM peak hours is shown in the network diagrams attached in Appendix H.

7.3 Assessment Scenarios

7.3.1 The assessment periods over which the development trips will be assessed on the local highway network are listed below:

- AM Peak: 08:00 to 09:00 was determined to be the network AM peak.
- PM Peak: 16:00 to 17:00 was determined to be the network PM peak.

7.3.2 The following assessment scenarios are proposed for the weekday AM and PM peak hours:

- 2025 Base
- 2030 Base + Committed
- 2030 Base + Committed + Development

7.3.3 The 2030 future year represents a future year 5-years post submission of the planning application.

7.4 Background Traffic Growth

7.4.1 To represent future traffic conditions on the local highway network, TEMPRO has been used to derive locally adjusted background traffic growth factors for the weekday AM and PM peak periods.

7.4.2 TEMPRO v8.0 calibrated with the Regional Transport Model (RTM 18) dataset has been used to generate traffic growth factors specific to the site's MSOA, 'Ribble Valley 007'.

7.4.3 The '2024-2025' growth factors have been applied to the 2024 ATC data, to enable the 2025 baseline flows to be generated. The future year growth factors have been applied to the 2025 base flows to generate future baseline flows for 2030.

7.4.4 A summary of the AM and PM peak period TEMPRO growth factors is shown in Table 7.1.

Table 7.1 : TEMPRO Growth Factors ('Ribble Valley 007' MSOA)

Day / Time Period	2024 - 2025	2025 - 2030
Weekday AM Period	1.0055	1.0568
Weekday PM Period	1.0053	1.0571

7.5 Committed Development

7.5.1 At the request of LCC Highways, the following committed development has been considered:

- **Lawsonsteads Development (App Ref : 3/2013/0137)** – 'A residential mixed-use development comprising up to 260 dwellings (C3), a primary school (D1), a new vehicular link between Clitheroe Road and the A671 including creation of a new junction both onto the A671 and Clitheroe Road, car parking, open space and associated landscaping.'

7.5.2 Committed development flows have been included for the above development with development flows and distributions taken from the approved Transport Assessment. The resulting committed development flows are presented within the network diagrams attached in Appendix H.

7.5.3 As stated previously, it should be noted that as part of the Lawsonsteads Development (App Ref : 3/2013/0137), a new signalised junction has been provided from Springwood Rive onto the A671, to reduce vehicle trips through Whalley and along Wiswell Lane. As the development is not yet operational, this trip distribution exercise has not taken into account the future operation of this junction. Therefore, this will support the robust junction capacity assessments outlined in this chapter.

7.6 Assessment Tools

Junctions 9 – ARCADY and PICADY

7.6.1 The industry standard traffic software package Junctions 9 (ARCADY) has been used to model roundabouts across the study area.

7.6.2 As an assessment tool, ARCADY results are typically reported for the following performance statistics:

- Ratio of Flow to Capacity (RFC):
- Max Queue in PCUs; and
- Delay in seconds per PCU

7.6.3 A Ratio of Flow to Capacity (RFC) value of 0.85 or less typically demonstrates that a junction arm or turning movement is operating within practical capacity and is therefore unlikely to experience regular queuing. However, junctions that are operating between 0.85 and 1.00 are considered to be operating within theoretical capacity. Any junction operating over 1.00 is considered to be operating outside of typically acceptable thresholds of capacity.

7.6.4 The queue results are measured in Passenger Car Units (PCU) and the delay results are measured in seconds per vehicle.

LinSig

7.6.5 The industry standard traffic software package LinSig (v3) has been used to model signalised junctions across the study area during the AM and PM peak periods. As an assessment tool, LinSig results are typically reported for the following performance statistics:

- Degree of Saturation (DoS) %
- Mean Maximum Queue (MMQ) (PCU); and
- Practical Reserve Capacity (PRC) %

7.6.6 DoS is expressed as a percentage and is reported for an individual link. It can be defined as the ratio of flow to capacity for the link. A DoS% value of 90% typically demonstrates that a link is operating within capacity.

7.6.7 MMQ is expressed in PCUs and represents the maximum queue within a typical cycle averaged over all the cycles within the modelled time period.

7.6.8 PRC is expressed as a percentage and is reported for each stage stream. The PRC % is calculated from the maximum DoS% on a link controlled by the stage stream and is a measure of how much additional traffic could pass through a junction controlled by the stage stream whilst maintaining a maximum DoS of 90% on all links.

7.7 Site Access / Clitheroe Road Priority Junction

7.7.1 A summary of the junction capacity results at the Site Access / Clitheroe Road priority junction are summarised in Table 7.2, with the full PICADY outputs included in Appendix J.

Table 7.2 : Site Access / Clitheroe Road – Capacity Modelling Results

Arm	Weekday AM Peak			Weekday PM Peak		
	Queue (PCU)	Delay (s)	RFC	Queue (PCU)	Delay (s)	RFC
2030 Base + Committed + Development						
Site Access	0.1	7.05	0.06	0.0	6.96	0.03
Clitheroe Road	0.0	6.28	0.02	0.0	6.53	0.04

7.7.2 The analysis in Table 7.2 confirms that the proposed site access is expected to operate comfortably within capacity and with negligible levels of queuing and delay in the 2030 Base + Committed + Development scenarios.

7.8 A671 / Whalley Road Signalised Junction

7.8.1 A summary of the junction capacity results at the A671 / Whalley Road signalised junction are summarised in Table 7.3 and Table 7.4, with the full LinSig outputs included in Appendix K.

7.8.2 The signal specifications have been obtained from LCC Highways and are attached in Appendix L.

Table 7.3 : A671 / Whalley Road - 2030 Base + Comm - LinSig Results

Arm	AM Peak			PM Peak		
	DoS (%)	Delay (PCUHr)	Queue (PCU)	DoS (%)	Delay (PCUHr)	Queue (PCU)
A671 N Ahead Ahead	60.8	3.4	6.8	80.6	4.8	7.1
A671S Ahead U-Turn	65.3	3.9	11.4	78.8	5.6	16.1
Whalley Road U-Turn Ahead	65.0	3.8	6.5	79.5	5.0	7.8
Total Delay (PCU/Hr)		11.16			15.40	
PRC%		37.8			11.7	

Table 7.4 : A671 / Whalley Road - 2030 Base + Comm + Development - LinSig Results

Arm	AM Peak			PM Peak		
	DoS (%)	Delay (PCUHr)	Queue (PCU)	DoS (%)	Delay (PCUHr)	Queue (PCU)
A671 N Ahead Ahead	64.6	3.5	6.9	79.1	4.6	6.8
A671S Ahead U-Turn	63.8	3.7	11.1	78.8	5.6	16.1
Whalley Road U-Turn Ahead	63.8	3.7	6.2	78.9	4.9	7.7
Total Delay (PCU/Hr)		11.02			15.10	
PRC%		39.3			13.8	

7.8.3 The modelling results in Table 7.4 confirm that in the worst-case scenario for the 2030 Base + Committed + Development scenarios, all approaches are expected to operate with a DoS below 90%. The modelling results show that in the 2030 Base + Committed + Development scenarios, both the AM and PM peak period are expected to operate with a PRC% of 37.8% and 11.7% respectively and that the proposed development would result in only minor increases to MMQs and delay.

7.8.4 On the basis that the queue length results for the 2025 Base model validated more closely with the observed queue length data attached in Appendix H, the LinSig outputs summarised in Table 7.3 do not consider the all-red stage for pedestrians within the stage sequencing.

7.8.5 For robustness, the LinSig model was also run based on an all-red being called every cycle and the LinSig results attached in Appendix K demonstrate that in the worst-case 2030 Base + Committed + Development scenarios, all approaches are expected to operate with a DoS below 90%.

7.9 King Street / Accrington Road Mini-Roundabout

7.9.1 A summary of the junction capacity results at the King Street / Accrington Road mini roundabout junction are summarised in Table 7.5, with the full ARCADY outputs included in Appendix M.

Table 7.5 : King Street / Accrington Road Mini Roundabout – Capacity Modelling Results

Arm	Weekday AM Peak			Weekday PM Peak		
	Queue (PCU)	Delay (s)	RFC	Queue (PCU)	Delay (s)	RFC
2025 Base						
Accrington Road	48.4	314.17	1.17	23.5	151.56	1.05
King Street S	1.7	11.43	0.63	1.7	11.28	0.63
King Street N	12.0	65.44	0.96	6.3	36.79	0.88
2030 Base + Committed						
Accrington Road	77.9	568.54	1.27	42.5	256.72	1.14
King Street S	2.0	12.81	0.68	2.2	13.29	0.69
King Street N	30.0	136.24	1.05	11.7	63.94	0.95
2030 Base + Committed + Development						
Accrington Road	83.5	612.91	1.29	44.1	272.53	1.15
King Street S	2.1	13.01	0.68	2.3	13.90	0.71
King Street N	36.1	158.36	1.07	12.8	68.74	0.96

7.9.2 The analysis in Table 7.5 confirms that both the Accrington Road and King Street N arms of the mini roundabout currently operate above capacity (RFC > 0.85) in the both the 2025 Base AM and PM scenarios.

7.9.3 The analysis also confirms that these arms are expected to operate above capacity in the 2030 Base + Committed scenarios, as well as the 2030 Base + Committed + Development scenarios.

7.9.4 It should be noted that the impact of the development on the operation of the roundabout is expected to be minimal. For example, the Accrington Road arm has an RFC of 1.17 in the AM 2025 Base scenario, rising to 1.27 (+0.10) in the 2030 Base + Committed scenario, and to 1.29 (+0.02) in the 2030 Base + Committed + Development scenario. A similar impact is also forecast in the PM scenarios at this arm and also the King Street N arm in both the AM and PM scenarios.

7.9.5 In terms of queuing and delay, the impact of the development proposals is also expected to be minimal. Upon review of the queue length surveys at the junction, it appears that ARCADY has overestimated the existing queuing and delay in the 2030 Base scenarios, particularly on the Accrington Road arm.

7.9.6 The ARCADY results therefore demonstrate that the proposed development will have a minor impact on the operation of the junction, with future year background traffic growth / committed development account for the largest increases in queuing, delay and RFC between the 2025 base year and 2030 future year scenarios.

7.10 Clitheroe Road / King Street / Station Road / Brooke's Lane Mini-Roundabout

7.10.1 A summary of the junction capacity results at the Clitheroe Road / King Street / Station Road / Brooke's Lane mini roundabout junction are summarised in Table 7.6, with the full ARCADY outputs included in Appendix N.

Table 7.6 : Clitheroe Road / King Street / Station Road / Brooke's Lane Mini Roundabout – Capacity Modelling Results

Arm	Weekday AM Peak			Weekday PM Peak		
	Queue (PCU)	Delay (s)	RFC	Queue (PCU)	Delay (s)	RFC
2025 Base						
Brooke's Lane	0.0	17.60	0.05	0.0	16.63	0.04
King Street	3.8	20.79	0.80	3.8	21.22	0.80
Station Road	1.7	11.34	0.63	2.3	15.32	0.70
Clitheroe Road	47.3	314.51	1.18	11.2	99.19	0.97
2030 Base + Committed						
Brooke's Lane	0.0	18.13	0.05	0.0	18.07	0.05
King Street	5.4	28.14	0.86	6.3	32.69	0.88
Station Road	2.2	13.82	0.69	3.5	22.08	0.79
Clitheroe Road	94.6	700.20	1.37	32.5	234.12	1.12
2030 Base + Committed + Development						
Brooke's Lane	0.0	18.13	0.05	0.0	18.10	0.05
King Street	5.6	29.02	0.86	7.1	36.39	0.89
Station Road	2.2	14.06	0.69	3.7	23.38	0.80
Clitheroe Road	107.4	781.02	1.40	35.5	251.68	1.13

7.10.2 The analysis in Table 7.6 confirms that the Clitheroe Road arm of the mini roundabout currently operates above capacity (RFC > 0.85) in the both the 2025 Base AM and PM scenarios.

7.10.3 The analysis also confirms that the Clitheroe Road and King Street arms are expected to operate above capacity in the 2030 Base + Committed scenarios, as well as the 2030 Base + Committed + Development scenarios.

7.10.4 It should be noted that the impact of the development on the operation of the roundabout is expected to be minimal. For example, the King Street arm has an RFC of 0.80 in the AM 2025 Base scenario, rising to 0.86 (+0.06) in the 2030 Base + Committed scenario, which it remains at in the 2030 Base + Committed + Development scenario. Such a pattern is also forecast in the PM scenarios, as well as for the Clitheroe Road arm in both the AM and PM scenarios.

7.10.5 The ARCADY results therefore demonstrate that the proposed development will have a minor impact on the operation of the junction, with future year background traffic growth / committed development account for the largest increases in queuing, delay and RFC between the 2025 base year and 2030 future year scenarios.

7.11 Summary

7.11.1 Overall, the junction capacity analysis shows that the proposed development is expected to have a low impact on the local highway network, with low increases in queuing, delay and impact on capacity. The analysis shows that the proposed development will not have a severe impact on the local highway network, which is the threshold stated by NFFP (Paragraph 116) under which development should not be refused on highways grounds.

8. Summary and Conclusion

8.1 Summary

8.1.1 Mode Transport Planning has been appointed by Pringle Homes to provide transport planning and highways advice in relation to a planning application for a residential development on Clitheroe Road in Whalley, Lancashire.

8.1.2 The proposed development comprises a total of 77 no. dwellings, with access taken from a new priority junction from Clitheroe Road.

8.1.3 The analysis in this report has been carried out in accordance with current policy, guidance, and best practice. The results demonstrate that:

- In accordance with local and national policy, the site is accessible by a range of sustainable modes of transport, including walking, cycling and bus services. These travel options provide a realistic alternative to single occupancy car travel.
- Access to the site will be taken from a new priority junction with a right-turn ghost island, from Clitheroe Road, which has achievable visibility splays in line with Manual for Streets guidance.
- A traffic calming scheme is proposed along Clitheroe Road to enforce the proposed 30mph speed limit.
- Swept path analysis shows that a refuse collection vehicle is able to safely access the site and manoeuvre within the internal layout.
- Car parking will be provided in line with local adopted standards.
- The proposed development is expected to generate 44 two-way trips during the AM peak period and 41 two-way trips during the PM peak period.
- Junction capacity analysis demonstrates that the proposed development's impact on the local highway network is expected to be low and is not considered 'severe' in the 2030 with development scenario.
- Overall, it can be concluded that the proposed development will not have an unacceptable impact on highway safety or a severe impact on the operation of the road network, which is the threshold stated by NPPF (Paragraph 116) under which development should not be refused on highways grounds.

8.2 Conclusion

8.2.1 In conclusion, based on the evidence and analysis within this report, there should be no highways or transport planning related reasons that prevent this planning application from being approved.

APPENDICES

APPENDIX A

Lancashire County Council Highways' Pre-App Correspondence

Rebecca Woolin
Mode Transport

Phone: 0300 123 6780
Email: developeras@lancashire.gov.uk

Your ref:
Our ref: Pre-app
Date: 27th January 2025

Address: Land east of Clitheroe Road, Whalley

Proposal: Proposed residential development circa 90 units

The submitted documents and plans, including application form, Sketch Layout and Location plan have been reviewed and the following our pre-application meeting on Thursday 23rd January 2025 the following comments are made.

The Council's advice is current on the date it is given. Whilst every attempt will be made to identify reasonably foreseeable future influences the Council cannot guarantee that its advice will take these into account. This may extend to matters such as changes in planning policy or planning precedent. The advice in any event will expire 12 months after the date on which it is given.

Proposal

The application seeks advice for a proposal for circa 90 new dwellings with a new access on Clitheroe Road.

Sustainability

A Framework Travel Plan should be submitted with the application. A robust Travel Plan and mitigation measures to support sustainable travel modes are required to support this development.

Lancashire County Council offer a Travel Plan support service whereby we oversee the progression from the Framework Travel Plan to the Full Travel Plan in line with agreed timescales and targets. To offer this service we would request a contribution of £6,000 based upon the number of units within a S106 agreement.

Linked to the Travel Plan we would seek to secure measures to support sustainable travel modes for residents at the site with contributions paid directly to each dwelling upon occupation of each dwelling (or group of dwellings – triggers to be later agreed in line with modal shift targets) within a S106 agreement should the modal shift targets not be met. The contribution of circa £250 per dwelling will fund a bus pass for a period of 3 months or a cycle voucher.

Bus services M2 (Burnley – Clitheroe), 280 (Preston – Skipton) and 22 (Clitheroe – Shadsworth) (services 280 and 22 are subsidised by LCC) runs along Clitheroe Road with bus stops within approximately 400m from the centre of the site. These bus stops need upgrading to quality bus stop standard with bus shelters.

The provision of high quality secure and covered cycle parking at the station would support further sustainable travel.

There is a Local Cycling and Walking Infrastructure Policy (LCWIP) for Ribble Valley published March 2024. Clitheroe Road is identified as a strategic route between Whalley and Barrow with measures identified for improved cycle infrastructure by widening existing shared footway/cycleways or making new on road cycle provision on Clitheroe Road.

Traffic Impact

There is committed development at Springwood Drive (Lawsonsteads) which needs to be included in the assessment. We believe that the recently approved housing developments in Barrow are built out.

We would request that the following junctions are assessed.

1. C549 Whalley Road/ A671 Whalley Road - signals
2. C549 Clitheroe Road/B6246 King Street/B6246 Station Road – mini roundabout
3. B6246 Accrington Road/C548 King Street/B6246 King Street – min roundabout
4. Site access - priority

New data will need to be collected for these junctions including queue lengths.

Peak time turning observations at a nearby new development would be beneficial to validate the distribution at the site access.

We consider trip rates of AM 0.14 arrivals, 0.445 departures and PM 0.437 arrivals, 0.226 departures are representative if these can be replicated in TRICS.

Construction traffic

A new temporary access on Clitheroe Road for construction traffic would be acceptable to allow works on site to commence. The detailed design of the temporary access must be agreed at condition discharge stage and be implemented under an agreement with Lancashire County Council. The visibility splays, geometry and surface will be matters to agree and it will be necessary to limit HGV movements to the off-peak movements 9.30am – 2.30pm with wheel washing and hard standing for operative parking and HGV turning to allow all vehicles to exit the site in forward gear.

Site Access

There is a single access onto Clitheroe Road proposed to serve the 90 new dwellings. We would consider a single access suitable for this proposal.

Clitheroe Road C549 is subject to a 40mph speed limit. Up to date speed data will determine 85%ile speeds in both directions to ensure suitable visibility splays are provided at the site access.

We would seek to remove the section of 40mph speed limit which is circa 500m long between the villages of Whalley and Barrow due to the short distance. The speed limit would be reduced to 30mph. Associated speed calming features would be necessary to promote speed compliance with gateway treatment with associated signage, lighting and lining.

An appropriate pedestrians and cycle crossing on Clitheroe Road is considered necessary for access to the northbound bus stop and wider footway network due to the lack of footway along the east side of Clitheroe Road.
Tie in measures to assist cyclists onto/off the carriageway will be required as part of the detailed design.
We discussed a new signalised crossing or uncontrolled crossing with a series of central islands to ensure reduced vehicle speeds for highway safety.

New connections onto the highway drainage system in Clitheroe Road will not be permitted.

The formation of the new access and off-site highway works should be undertaken with a S278 agreement with Lancashire County Council.

Off-site highway works

To mitigate the impact of the development on the highway network the following off-site highway works are requested.

1. The upgrade/provision of 2 quality bus stops on Clitheroe Road to support all users to travel to/from site sustainably.
2. Provision of new footway/cycleway along Clitheroe Road A59 to link into the crossing and existing footway provision.
3. Reduction in speed limit to 30mph and associated traffic regulation orders with enhanced gateway features, lighting and associated signing and lining to promote speed compliance on Clitheroe Road for highway safety.
4. New toucan crossing or series of central islands to provide uncontrolled crossing points on Clitheroe road to link the footway/cycleway provision.
5. New site access arrangement with priority junction.

The off-site highway works will be constructed under a S278 agreement with Lancashire County Council and shall be constructed prior to first trading.

Contributions

To mitigate the impact of the development on the highway network the following contributions are requested within a Section 106 agreement.

1. Travel Plan support £6,000. Circa £250 per dwelling to support a modal shift linked to Travel Plan.
2. Public Transport support for LCC subsidised bus services.

PROW and LCWIP

There are no public rights of way crossing the site. Measures on Clitheroe Road in accordance with LCWIP to enhance the primary route for walking and cycling on Clitheroe Road.

Internal layout

The estate road should be provided at 5.5m wide with 2m wide footways to both sides. Swept path analysis for a 11.2m long refuse wagon should be provided.

The estate roads and associated infrastructure should be built to adoptable standards and we would seek to formally adopt the roads under S38 Highways Act 1980.

The sketch layout provided would need an additional turning head in the vicinity of plot 50. The cul-de-sacs off the main estate road serving more than 5 dwellings should have a footway along the frontage of the dwellings. The refuse vehicle will not drive onto blocked paved shared areas therefore refuse collection points should be provided adjacent to the turning head.

A drainage layout is provided for the A59 road construction. Any easements in place over the land to allow access to the embankment of the A59 should be investigated and access should be maintained for the Highway Authority.

Parking

Each dwelling will require 1 car parking space for 1 bedroom, 2 spaces for 2-3 bedrooms and 3 spaces for 4+ bedrooms and secure covered cycle parking. Garages should measure 3m by 6 internally to count as a car parking space and secure cycle parking. Plots without garages will require a separate secure, covered store.

Conclusion

Lancashire County Council acting as the Highway Authority would advise that the impact of the development on the surrounding highway network is thoroughly investigated and presented when submitted in accordance with our advice.

Hi Kelly,

Thank you for your feedback.

Please find attached the updated drawing to address your comments. We would be grateful if you could confirm that LCC Highways are now happy with the proposed traffic calming measures in principle.

Any queries, please let us know.

Kind regards

Rebecca

Subject: Re: Pre-application advice Land east of Clitheroe Road, Whalley

Hi Kelly,

Thanks for your comments.

Regarding point 1, the right turn lane has been designed to DMRB 30 mph standard (25m + 10m). This could be reduced by 10m (to 25m) if you are happy to accept the length below standards.

Regarding point 2, visibility splays can be achieved for MfS standards, but not DMRB. Based on the proposals to reduce the speed limit from 40 mph to 30 mph, including the proposed traffic calming measures, we believe this is acceptable. Please could you confirm that this is acceptable to LCC Highways.

Any queries, please let me know.

Kind regards

Rebecca

Subject: RE: Pre-application advice Land east of Clitheroe Road, Whalley

Hi Rebecca,

Thanks for the scheme drawings which we've reviewed and we would make the following comments.

1. There is conflict with the refuge (SB side of site access), SB bus stop and SB cyclists rejoining carriageway. We recommend additional separation between the SB bus stop, the new refuge and cyclists rejoining. Can the right turn lane be shortened so that the refuge can be moved north and then the separation between the bus stop and cyclists rejoining is achieved?
2. Visibility splays for the recorded 85%ile speeds to be provided at the site access rather than 43m for 30mph.

3. Add centre hatching under the A59 to provide a continuous centre hatch to the north and south of the A59.
4. Add a central splitter island (not a crossing point) to the south side of the right turn lane to the Industrial area to protect right turners.
5. Remove parking bay and build outs for cemetery as this will be an infrequent use and can remain informal.
6. Add centre hatch for full length to Lamb Roe Gardens.
7. Add 30 red backed roundels at current 30/40 terminal points to north and south terminals where signage is to be removed and mid-point around the cemetery.

As you are undoubtedly aware, the detailed design will be subject to a technical approval and safety audit under the S278 agreement process and we may request changes as a result of this. However we are happy to agree the principles now.

Thanks
Kelly

Cc: Michael Anthony <michaelanthony@modetransport.co.uk>
Subject: Re: Pre-application advice Land east of Clitheroe Road, Whalley

Hi Kelly,

Hope you are well.

Please find attached our initial site access drawing, featuring the proposed traffic calming measures along Clitheroe Road to reduce it a 30 mph speed limit.

We have provided a footway along the frontage of the site on Clitheroe Road and a pedestrian refuge to the north and south of the proposed access.

Along the existing section of Clitheroe Road with a 40mph speed limit, there is no footway on the eastern side so there is no scope to introduce further pedestrian refuges as traffic calming. Here, we have tried to reduce speeds by reducing the excessive lane widths through the introduction of 2 ghost island junctions, at the site access and the Palm Tree Company access to the north, and the introduction of a marked parking bay to the north of the cemetery access to accommodate existing on-street parking related to the cemetery.

Streetlights are also present and evenly spaced c.40m apart which should also further support the reduction in speed limit in this section of Clitheroe Road.

I would be grateful of you could confirm that the proposals are acceptable. Any questions, please let us know.

Kind regards

Rebecca

Subject: RE: Pre-application advice Land east of Clitheroe Road, Whalley

Hi Rebecca,

Those revised trip rates are acceptable.

The traffic signal team mailbox is: signals@lancashire.gov.uk

We've request the full deed from the land registry for the land which forms the A59 embankment. The freeholder is recorded as National Highways which is due to the A59 previously being a trunk road maintained by National Highways, however when it was de-trunked it was transferred to Lancashire County Council.
We would advise that the developer seeks to also confirm if there are any easements in place across the development site for access to the A59, if they have not done already.

I've attached the drainage layout for the A59.

Thanks
Kelly

Hi Kelly,

Thank you for providing your formal comments.

Regarding the trip rates, I have undertaken a new trip generation exercise using TRICS to ascertain trip rates that reflect the Northwest Preston trip rates more closely, as requested. Please see the attached revised trip rates, which are also summarised below:

- AM - 0.174 arrivals, 0.403 departures
- PM - 0.357 arrivals, 0.177 departures

These trip rates are representative of the site in terms of location type and development size. They are based on up to date data, and therefore reflect ongoing travel planning efforts nationally.

I would be grateful if you could confirm that these trip rates are suitable to use as part of our analysis.

Kind regards

Rebecca

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
Actual Range: 73 to 110 (units:)
Range Selected by User: 70 to 110 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: All Surveys Included

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:
Selection by: Include all surveys

Date Range: 01/01/20 to 07/06/24

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Monday	3 days
Tuesday	4 days
Wednesday	3 days
Friday	2 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count	11 days
Directional ATC Count	1 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaking using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre)	3
Edge of Town	9

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Residential Zone	12

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Inclusion of Servicing Vehicles Counts:

Servicing vehicles Included	X days - Selected
Servicing vehicles Excluded	12 days - Selected

Secondary Filtering selection:

Use Class:

C3	12 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:
All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

1,001 to 5,000	1 days
5,001 to 10,000	3 days
10,001 to 15,000	6 days
15,001 to 20,000	1 days
20,001 to 25,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

5,001 to 25,000	1 days
25,001 to 50,000	3 days
50,001 to 75,000	2 days
100,001 to 125,000	1 days
125,001 to 250,000	5 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	1 days
1.1 to 1.5	9 days
1.6 to 2.0	2 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	9 days
No	3 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	12 days

This data displays the number of selected surveys with PTAL Ratings.

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

23:00 - 24:00									
Total Rates:			2.419			2.437			4.856

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Parameter summary

Trip rate parameter range selected:	73 - 110 (units:)
Survey date date range:	01/01/20 - 07/06/24
Number of weekdays (Monday-Friday):	12
Number of Saturdays:	0
Number of Sundays:	0
Surveys automatically removed from selection:	0
Surveys manually removed from selection:	0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are show. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

Analysis Set Details

ID	Include in report	Network flow scaling factor (%)	Network capacity scaling factor (%)
A1	✓	100.000	100.000

2025 Base, AM

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
1	untitled	T-Junction	Two-way		0.00	A

Junction Network Options

Driving side	Lighting	Network residual capacity (%)	First arm reaching threshold
Left	Normal/unknown	900	

Arms

Arms

Arm	Name	Description	Arm type
A	Clitheroe Road N		Major
B	Site Access		Minor
C	Clitheroe Road S		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C	8.50		✓	2.50	100.0		-

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B	One lane	2.75	150	52

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (PCU/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	539	0.087	0.221	0.139	0.316
B-C	640	0.087	0.221	-	-
C-B	653	0.225	0.225	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

Demand Set Details

Legend

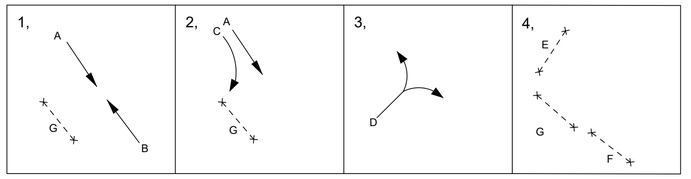
Signals Equipment

- Traffic signals controller cabinet
- Electrical service box / mains electricity feeder pillar for dedicated mains electrical supply to traffic signals only
- Traffic signals pole Standard length signals pole, 4m long
- 3-aspect R/A/G signals head - primary hoods
- Toucan RM/GM near-side indicator and push button demand unit (combined)
- Pedestrian push button demand unit
- Pedestrian tactile rotating cone
- Pedestrian on-crossing detector
- Pedestrian kerb-side detector
- Photo-electric cell (solar cell)
- (1) Traffic signals pole reference No.

Other Equipment

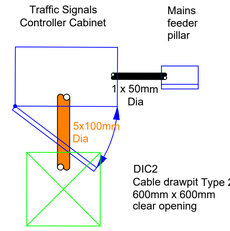
- DIC2 — Traffic signals cable drawpit Type 2 600mm x 600mm clear opening
- DIC3 — Traffic signals cable drawpit Type 3 450mm x 450mm clear opening
- PJB1 — Traffic signals pavement jointing box 450mm x 300mm clear opening
- (1) — Traffic signals duct 100mm Dia, orange in colour, non-ribbed
- Traffic signals pole foundation / retention socket "NAL" Type or equivalent
- Vehicle magnetometer detector
- Anti-skid surface dressing
- Tactile paving (400mm x 400mm slabs)
- Access point for magnetometer
- Magnetometer repeater

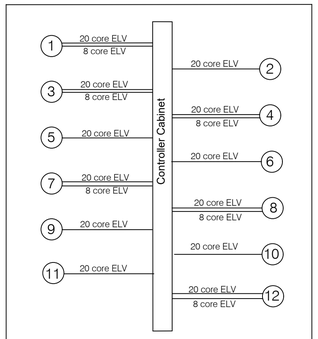
Signals Phasing / Staging



Controller Detail

(n.t.s)





Signals Cabling Schematic

GENERAL NOTES

1, This drawing shall be read in conjunction with L.C.C. Special Details Nos. LL1 - LL40 inclusive and L.C.C. Special Detail No. IL1.

2, All equipment including traffic signals, street furniture, ducts and drawpits shall be of a type approved by the Engineer.

3, The precise location of all traffic signals equipment shall be confirmed on site by the Engineer's traffic signals representative.

4, If any traffic signal pole, or any other item of traffic signals equipment or street furniture, cannot be sited in the specified location, for whatever reason, the contractor shall determine a suitable alternative location. The Contractor shall provide full details to the Engineer's traffic signals representative and either obtain his agreement to the alternative location or receive instruction on action to be taken.

5, Traffic signals poles (supplied) shall be erected in accordance with L.C.C. Special Details Nos. LL1, LL2 and LL3 and at a planting depth of 600mm below finished footway surface level. Any pole which cannot be installed at this depth, for whatever reason, must be cut accordingly and fitted with a metal plate at the pole base. The Contractor shall provide full details to the Engineer's traffic signals representative and either obtain his agreement or receive his instruction on action to be taken.

6, The Contractor shall supply and install the new traffic signals duct and drawpit infrastructure, including cable drawpits and signals pole retention sockets, in accordance with L.C.C. Special Details Nos. LL20-LL26 inclusive.

7, The Contractor shall supply and install all new traffic signals ducts in accordance with L.C.C. Special Detail No. IL 1.

8, All new traffic signals ducts are to be single 100mm Dia. non-ribbed except where stated otherwise.

9, Traffic signals controllers are to be built and configured in accordance with DfT Specification TR 2500 A.

10, The Contractor is to strip out all redundant traffic signals cabling and remove from site.

11, The Contractor shall supply and install all new traffic signals cables, including:
New LV and ELV signals cables
New detector feeder cables
and
New detector loop cables

12, All ELV traffic signals cables are to have Min 1.5mm^2 CSA conductors.

13, The Contractor's traffic signals installer must be capable of installing and commissioning pedestrian kerb-side detection and pedestrian on-crossing detection.

14, The mains electrical supply to the traffic signals feeder pillar shall be classed as 'Network Cabling'. All other cabling from the feeder pillar to the controller cabinet, and from the controller cabinet to the traffic signals equipment shall not be classed as 'Network Cabling'.

15, The Contractor shall securely cover all signals heads and push button units with orange Polyethylene covers marked LCC. These covers are to remain fitted until the commissioning and switch-on of the traffic signals installation.

16, The Contractor shall provide and erect temporary warning signs to Diagram No. 7014 reading "New Traffic Signals Ahead" as directed by the Engineer. These signs are to be fixed to suitable lighting columns as directed by the Engineer and the Contractor is to remove them to stores 90 days after the commissioning and switch on of the new traffic signals installation.

NEW TRAFFIC SIGNALS AHEAD

Sign to Diagram No. 7014

17, The Contractor shall strictly comply with the requirements of Chapter 8 (2009) of the Traffic Signs Manual. It is essential that all temporary traffic and/or pedestrian management proposals are pre-planned and submitted to the Engineer in sufficient time to enable any consultations which may be necessary with the police and any other interested parties. The Contractor shall ensure that all traffic and/or pedestrian management equipment is fully maintained to the specified standards at all times as required by the works and agreed with the Engineer.

18, All stop lines are to be 300mm wide.

19, This drawing shall be read in conjunction with the related Appendix 12/5 and LCC's General Specification for Traffic Signals.

SITE SPECIFIC NOTES

1, An ELV photo-electric solar switch shall be installed on signals pole No. 1

2, Areas of anti-skid surface dressing are to extend to and terminate at the line of road studs at pedestrian crossing points and NOT at the vehicle stop line.

3, The magnetometer positions shown are currently indicative.

4, Toucan RM/GM near-side indicator and push button demand unit (combined) to be Near Field Of View (NFOV)

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle. Network Residual Capacity indicates the amount by which network flow could be increased before a user-definable threshold (see Analysis Options) is met.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Mini-roundabout		Mini-roundabout appears to have unbalanced flows and may behave like a priority junction; treat results with caution. See User Guide for details.[Arms 2 and 3 have 69% of the total flow for the roundabout for one or more time segments][Arms 2 and 4 have 68% of the total flow for the roundabout for one or more time segments]
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Mini-roundabout		Mini-roundabout appears to have unbalanced flows and may behave like a priority junction; treat results with caution. See User Guide for details.[Arms 2 and 4 have 69% of the total flow for the roundabout for one or more time segments]
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Mini-roundabout		Mini-roundabout appears to have unbalanced flows and may behave like a priority junction; treat results with caution. See User Guide for details.[Arms 2 and 3 have 73% of the total flow for the roundabout for one or more time segments]
Warning	Vehicle Mix		HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning.

Junction Network

Junctions

Junction	Name	Junction type	Use circulating lanes	Arm order	Junction Delay (s)	Junction LOS
1	untitled	Mini-roundabout		1, 2, 3, 4	88.54	F

Junction Network Options

Driving side	Lighting	Road surface	In London	Network residual capacity (%)	First arm reaching threshold
Left	Normal/unknown	Normal/unknown		-22	Arm 4
