Wet pour is usually installed in a two-layer system. The topping layer or 'wearing course' of wet pour is formed using EPDM (Ethylene Propylene Diene Modified) rubber crumbs that are bonded together with a polyurethane binder. The base layer is formed using bound SBR (Styrene Butadiene Rubber) granules to produce the absorbing qualities of wet pour Wet pour requires a hard sub-base (MOT Type1) for us to install on top of. When installed onto a free-draining sub-base, wet pour is porous and is suitable for all-year-round use. All panels made from High Density Polyethylene, Non toxic and complies with EN71.
