Dear Ribble Valley Borough Council

Application to Discharge Condition 8 - Surface Water & Foul Drainage

Please find enclosed a complete drainage design submission prepared by Countywide Consulting Engineers Ltd to discharge Condition 8. The report and supporting documents provide full details of both the surface water and foul water drainage systems in accordance with the NPPF, Planning Practice Guidance and the Defra Technical Standards for Sustainable Drainage.

The drainage strategy is SuDS-led, restricting surface water discharge to 2.0 L/s and conveying flows to the existing vegetated swale and Ordinary Watercourse. No surface water enters the foul system. Foul effluent is treated via a Klargester BioTec+ Package Treatment Plant before controlled discharge via an angled headwall with flap valve.

This submission includes:

- Drainage Design Statement & Specification (Sections 1–9)
- Surface Water & Foul Drainage Layout (0001)
- Drainage Outfall Arrangement (0002)
- Site Plan & General Arrangement (0003)
- EA Flood Map for Planning (Flood Zone 1)
- HR Wallingford FEH2025 Greenfield Runoff Report
- Complete InfoDrainage Hydraulic Model Output
- Klargester BioTec+ Technical Literature

The design is robust, environmentally compliant, hydrologically sound and implementable. We respectfully request that Condition 8 is now discharged.

Yours sincerely,

Countywide Consulting Engineers Ltd
