VISUAL TREE ASSESSMENT / COMMENTS

The removal of the Sycamore T1 which has been in decline with progressive crown retrenchment and reduced vitality with the additional issue of extensive decay throughout will have relatively limited impact on the street scene and tree scape in the local context.

Crown reduction of Sycamores T2 and T3 is required to reduce wind loading and limb stress, bringing the risk to an acceptable level for road users, pedestrians and nearby property. This will have minimal impact on the two trees visual amenity value.
