GRASS SEEDING AND MAINTENANCE			
Preparing for topsoiling Grassing and cultivation shall be in accordance with BS 4238:1989 section 2. Subsoil that is to receive topsoil that, where otherwise overcompacted or not, be thoroughly broken up by hand, by heavy rollers, by rollers or steel equipment with adequate pressure made to thoroughly break up the surface to a depth of 150mm, cleared of all large stones. On small areas, heavy rollers or rollers shall be used to break down any surface irregularities and to ensure vegetation and other debris is removed.			
Subsoil grading Subsoil shall be graded after levelling on and off, and this shall be undertaken by the use of a tractor and blade grader on large areas and by a small mechanical grader or by hand on small areas. Ground shall be at or close to level by the use of the grader, by grading or by other purpose after subsoiling and/or topsoiling has taken place.			
Making up levels Topsoil shall be transported to long lying areas to form transition levels. It shall be lightly compacted and then broken up manually to receive topsoil. Imported fill material shall be natural subsoil free from metal, concrete or organic materials with any one dimension greater than 100mm. All imported fill material shall be approved by the Landscape Architect prior to spreading on site.			
Supply of topsoil Topsoil to be supplied that is approved by the Landscape Architect and details of the source of supply shall be provided on or before inspection may be made before delivery. Topsoil shall be delivered in 100mm layers, in 200mm layers or in 300mm layers.
