

A parasol with that clever extra something

The pagoda top catches the eye as well as providing enhanced ventilation and significantly adds to the wind performance..

Sunshade fabrics: Luga-Tec for optimal stretch or acrylic fabrics with fantastic designs

The demands placed on the fabric of large sunshades are immense. It was with this in mind that **Luga-Tec** was developed – a 100% polyester material that is tear resistant and treated on one side with a special water repellent coating. The fabric's high tensile properties mean that it is perfectly taut when open.

Luga-Tec is available in eight fresh colours.

The **Lugano** large sunshade can also be ordered with water repellent acrylic fabrics from the current **moments** collection, with 140 different patterns. In this way you can find the perfect match between the sunshade fabric and your awning.

**Only at Schattenparadies:
a huge range of colours**

Choose from a large palette of RAL colours as well as structured colours and scratch resistant and robust special colours.
